SECTION 13 - CLIMATE CONTROL - CHAPTER 1

A water valve, 1, is located under an access panel just above, on left side of the seat pan. The valve is installed to control the flow of hot engine coolant through the heater core. The valve is controlled with a cable-operated switch located inside the cab.

HEATER SYSTEM

The water pump, 1, sends coolant through the engine block and back through the cylinder head to the thermostat. The coolant then flows to the heater core and back to the water pump.

Coolant Flow Chart

- Thermostat (24) to Heater Core
- Heater Core (24) to Water Pump
- Water Pump (24) to Engine Block
- Engine Block to Cylinder Head
- Cylinder Head to Thermostat

As the coolant reaches operating temperature, turn the temperature knob, 1, clockwise to open the heater valve, 2.

The temperature knob mechanically controls the opening or closing of the heater valve.

NOTE: To increase cab temperature, turn knob, 1, clockwise and to decrease cab temperature, turn knob, 1, counterclockwise.

SECTION 13 - CLIMATE CONTROL - CHAPTER 1

As the hot coolant is flowing through the heater core, 1, the blower motor, 2, is blowing across the heater core plate to produce the hot air coming out of the vents.

NOTE: The A/C and heater valves are same size and work.

WIND CONTROL PANEL

A four speed switch, 1, controls the blower motor. The fan speed switch, 1, selects which circuit of the motor to supply with power. The switch uses a speed control resistor to change the fan speed. The motor is wired internally to produce the three different speeds.

The A/C switch, 2, must be depressed to activate the air conditioning system. A light will appear when the switch is activated.

The temperature switch, 3, only controls the water valve. The water valve can be opened and closed with a cable that is positioned between the switch and the water valve.

CAB AIR FILTER

The cap on filter, 1, is located on the right side of the seat pan below the access panel, 2.

The filter removes pollen and dust from the incoming air.
