When the key is in the 'ON' position, the plunger is depressed and the contact is closed. This allows current to flow from the battery to the ignition coil and then to the distributor and spark plugs.

When the key is in the 'OFF' position, the plunger is raised and the contact is open. This stops the flow of current from the battery to the ignition coil and then to the distributor and spark plugs.

When the key is in the 'START' position, the plunger is depressed and the contact is closed. This allows current to flow from the battery to the ignition coil and then to the distributor and spark plugs.

When the key is in the 'STOP' position, the plunger is raised and the contact is open. This stops the flow of current from the battery to the ignition coil and then to the distributor and spark plugs.

When the key is in the 'ON' position, the plunger is depressed and the contact is closed. This allows current to flow from the battery to the ignition coil and then to the distributor and spark plugs.
