Applied Network Security Arthur Salmon, Warun Levesque, Michael McLafferty, 2017-04-28 Master the art of detecting and averting advanced network security attacks and techniques About This Book Deep dive into the advanced network security attacks and techniques by leveraging tools such as Kali Linux 2 Metasploit Nmap and Wireshark Become an expert in cracking WiFi passwords penetrating anti virus networks sniffing the network and USB hacks This step by step guide shows you how to confidently and quickly detect vulnerabilities for your network before the hacker does Who This Book Is For This book is for network security professionals cyber security professionals and Pentesters who are well versed with fundamentals of network security and now want to master it So whether you're a cyber security professional hobbyist business manager or student aspiring to becoming an ethical hacker or just want to learn more about

the cyber security aspect of the IT industry then this book is definitely for you

**What You Will Learn**

- Use SET to clone webpages including the login page
- Understand the concept of Wi Fi cracking and use PCAP file to obtain passwords
- Attack using a USB as payload injector
- Familiarize yourself with the process of trojan attacks
- Use Shodan to identify honeypots
- rogue access points
- vulnerable webcams and other exploits found in the database
- Explore various tools for wireless penetration testing and auditing
- Create an evil twin to intercept network traffic
- Identify human patterns in networks attacks

**In Detail**

Computer networks are increasing at an exponential rate and the most challenging factor organisations are currently facing is network security Breaching a network is not considered an ingenious effort anymore so it is very important to gain expertise in securing your network

The book begins by showing you how to identify malicious network behaviour and improve your wireless security We will teach you what network sniffing is the various tools associated with it and how to scan for vulnerable wireless networks Then we ll show you how attackers hide the payloads and bypass the victim s antivirus Furthermore we ll teach you how to spoof IP MAC address and perform an SQL injection attack and prevent it on your website We will create an evil twin and demonstrate how to intercept network traffic Later you will get familiar with Shodan and Intrusion Detection and will explore the features and tools associated with it Toward the end we cover tools such as Yardstick Ubertooth Wifi Pineapple and Alfa used for wireless penetration testing and auditing This book will show the tools and platform to ethically hack your own network whether it is for your business or for your personal home Wi Fi Style and approach This mastering level guide is for all the security professionals who are eagerly waiting to master network security skills and protecting their organization with ease It contains practical scenarios on various network security attacks and will teach you how to avert these attacks

**Quick Start Guide to Penetration Testing** Sagar Rahalkar,2018-11-29

Get started with NMAP OpenVAS and Metasploit in this short book and understand how NMAP OpenVAS and Metasploit can be integrated with each other for greater flexibility and efficiency You will begin by working with NMAP and ZENMAP and learning the basic scanning and enumeration process After getting to know the differences between TCP and UDP scans you will learn to fine tune your scans and efficiently use NMAP scripts This will be followed by an introduction to OpenVAS vulnerability management system You will then learn to configure OpenVAS and scan for and report vulnerabilities The next chapter takes you on a detailed tour of Metasploit and its basic commands and configuration You will then invoke NMAP and OpenVAS scans from Metasploit Lastly you will take a look at scanning services with Metasploit and get to know more about Meterpreter an advanced dynamically extensible payload that is extended over the network at runtime The final part of the book concludes by pentesting a system in a real world scenario where you will apply the skills you have learnt

**What You Will Learn**

- Carry out basic scanning with NMAP
- Invoke NMAP from Python
- Use vulnerability scanning and reporting with OpenVAS
- Master common commands in Metasploit
