Byrd, 2023-12-08 Methodological and Technological Advances in Death Investigations: Application and Case Studies focuses on advancements in both methods and technology in death investigations. Specifically in the areas of latent fingerprints, facial recognition, wildlife forensics using aerial vehicles, and 3D ID. The combination of national and international authors and a discussion of the state of forensic science over a decade after the National Academies 2009 Report Strengthening Forensic Science in the United States: A Path Forward further highlights the boundaries, limitations, and context in which these newer technologies and applications act synergistically to enhance forensic science. Synthesizes new and emerging technologies to put them in perspective for researchers and practitioners such as facial recognition using aerial vehicles and 3D ID. Includes case studies throughout that explain how certain advanced technologies impact investigations. Fills a gap in literature with more cross-disciplinary topics that pertain to death investigations. **Journal of the Physical Society of Japan**, 2014 **Resources in Education**, 1986
