**Neuro-fuzzy and Soft Computing** Jyh-Shing Roger Jang, Chuen-Tsai Sun, Eiji Mizutani, 1997 Neuro Fuzzy and Soft Computing provides the first comprehensive treatment of the constituent methodologies underlying neuro fuzzy and soft computing an evolving branch of computational intelligence The constituent methodologies include fuzzy set theory neural networks data clustering techniques and several stochastic optimization methods that do not require gradient information In particular the authors put equal emphasis on theoretical aspects of covered methodologies as well as empirical observations and verifications of various applications in practice The book is well suited for use as a text for courses on computational intelligence and as a single reference source for this emerging field To help readers understand the material the presentation includes more than 50 examples more than 150 exercises over 300 illustrations and more than 150 Matlab scripts In addition Matlab is utilized to visualize the processes of fuzzy reasoning neural network learning neuro fuzzy integration and training and gradient free optimization such as genetic algorithms simulated annealing random search and downhill Simplex method The presentation also makes use of SIMULINK for neuro fuzzy control system simulations All Matlab scripts used in the book are available on the free companion software disk that may be ordered by using the enclosed reply card The book also contains an Internet Resource Page to point the reader to on line neuro fuzzy and soft computing home pages publications public domain software research institutes news groups etc All the HTTP and FTP addresses are available as a bookmark file on the companion software disk

**Fuzzy Systems and Soft Computing in Nuclear Engineering** Da Ruan, 2013-11-21 Fuzzy systems and soft computing are new computing techniques that are tolerant to imprecision uncertainty and partial truths Applications of these techniques in nuclear engineering present a tremendous challenge due to its strict nuclear safety regulation The fields of nuclear engineering fuzzy systems and soft computing have nevertheless matured considerably during the last decade This book presents new application potentials for Fuzzy Systems and Soft Computing in Nuclear Engineering The root of this book can be traced back to the series of the first second and third international workshops on Fuzzy Logic and Intelligent Technologies in Nuclear Science FUNS which were successfully held in Mol September 14 16 1994 FLINS 94 in Mol September 25 27 1996 FLINS 96 and in Antwerp September 14 16 1998 FLINS 98 The conferences were organised by the Belgian Nuclear Research Centre SCKeCEN and aimed at bringing together scientists researchers and engineers from academia and industry at introducing the principles of fuzzy logic neural networks genetic algorithms and other soft computing methodologies to the field of nuclear engineering and at applying these techniques to complex problem solving within nuclear industry and related research fields This book as its title suggests consists of nuclear engineering applications of fuzzy systems Chapters 1 10 and soft computing Chapters 11 21 Nine pertinent chapters are based on the extended version of papers at FLINS 98 and the other 12 chapters are original contributions with up to date coverage of fuzzy and soft computing applications by leading researchers written exclusively for this book

**Modelling Dynamics in**

**Processes and Systems** Wojciech Mitkowski, 2009-06-01 Dynamics is what characterizes virtually all phenomena we face in the real world and processes that proceed in practically all kinds of inanimate and animate systems notably social systems For our purposes dynamics is viewed as time evolution of some characteristic features of the phenomena or processes under consideration It is obvious that in virtually all non trivial problems dynamics can not be neglected and should be taken into account in the analyses to first get insight into the problem consider and second to be able to obtain meaningful results A convenient tool to deal with dynamics and its related evolution over time is to use the concept of a dynamic system which for the purposes of this volume can be characterized by the input control state and output spaces and a state transition equation Then starting from an initial state we can find a sequence of consecutive states outputs under consecutive inputs controls That is we obtain a trajectory The state transition equation may be given in various forms exemplified by differential and difference equations linear or nonlinear deterministic or stochastic or even fuzzy imprecisely specified fully or partially known etc These features can give rise to various problems the analysts may encounter like numerical difficulties instability strange forms of behavior e g chaotic etc This volume is concerned with some modern tools and techniques which can be useful for the modeling of dynamics We focus our attention on two important areas which play a key role nowadays namely automation and robotics and biological systems We also add some new applications which can greatly benefit from the availability of effective and efficient tools for modeling dynamics exemplified by some applications in security systems
