Neurogastronomy Gordon M. Shepherd, 2011-12-02 A personal yet magisterial account of the new brain based approach to flavor perception a panoramic view of science culture and behavior Avery Gilbert author of What the Nose Knows Leading neuroscientist Gordon M Shepherd embarks on a paradigm shifting trip through the human brain flavor system laying the foundations for a new scientific field neurogastronomy Challenging the belief that the sense of smell diminished during human evolution Shepherd argues that this sense which constitutes the main component of flavor is far more powerful and essential than previously believed Shepherd begins Neurogastronomy with the mechanics of smell particularly the way it stimulates the nose from the back of the mouth As we eat the brain conceptualizes smells as spatial patterns and from these and the other senses it constructs the perception of flavor Shepherd then considers the impact of the flavor system on contemporary social behavioral and medical issues He analyzes flavor s engagement with the brain regions that control emotion food preferences and cravings and he even devotes a section to food s role in drug addiction and building on Marcel Proust s iconic tale of the madeleine its ability to evoke deep memories Shepherd connects his research to trends in nutrition dieting and obesity especially the challenges that many face in eating healthily He concludes with human perceptions of smell and flavor and their relationship to the neural basis of consciousness Everyone from casual diners and ardent foodies to wine critics chefs scholars and researchers will delight in Shepherd s fascinating scientific gastronomic adventures Those who make the effort will be rewarded they ll never look at eating the same way again Library Journal

Handbook of Molecular Gastronomy Christophe Lavelle, Herve This, Alan L. Kelly, Roisin Burke, 2021-06-08 Handbook of Molecular Gastronomy Scientific Foundations and Culinary Applications presents a unique overview of molecular gastronomy the scientific discipline dedicated to the study of phenomena that occur during the preparation and consumption of dishes It deals with the chemistry biology and physics of food preparation along with the physiology of food consumption As such it represents the first attempt at a comprehensive reference in molecular gastronomy along with a practical guide through selected examples to molecular cuisine and the more recent applications named note by note cuisine While several books already exist for a general audience either addressing food science in general in a light way and or dealing with modern cooking techniques and recipes no book exists so far that encompasses the whole molecular gastronomy field providing a strong interdisciplinary background in the physics biology and chemistry of food and food preparation along with good discussions on creativity and the art of cooking Features Gives A Z coverage to the underlying science physics chemistry and biology and technology as well as all the key cooking issues ingredients tools and methods Encompasses the science and practice of molecular gastronomy in the most accessible and up to date reference available Contains a final section with unique recipes by famous chefs The book is organized in three parts The first and main part is about the scientific discipline of molecular and physical gastronomy it is organized as an encyclopedia with entries in alphabetical order gathering the

contributions of more than 100 authors all leading scientists in food sciences providing a broad overview of the most recent research in molecular gastronomy The second part addresses educational applications of molecular gastronomy from primary schools to universities The third part provides some innovative recipes by chefs from various parts of the world The authors have made a particular pedagogical effort in proposing several educational levels from elementary introduction to deep scientific formalism in order to satisfy the broadest possible audience scientists and non scientists This new resource should be very useful to food scientists and chefs as well as food and culinary science students and all lay people interested in gastronomy

Neuroenology Gordon M. Shepherd,2016-11-22 In his new book Gordon M Shepherd expands on the startling discovery that the brain creates the taste of wine This approach to understanding wine s sensory experience draws on findings in neuroscience biomechanics human physiology and traditional enology Shepherd shows just as he did in Neurogastronomy How the Brain Creates Flavor and Why It Matters that creating the taste of wine engages more of the brain than does any other human behavior He clearly illustrates the scientific underpinnings of this process along the way enhancing our enjoyment of wine Neuroenology is the first book on wine tasting by a neuroscientist It begins with the movements of wine through the mouth and then consults recent research to explain the function of retronasal smell and its extraordinary power in creating wine taste Shepherd comprehensively explains how the specific sensory pathways in the cerebral cortex create the memory of wine and how language is used to identify and imprint wine characteristics Intended for a broad audience of readers from amateur wine drinkers to sommeliers from casual foodies to seasoned chefs Neuroenology shows how the emotion of pleasure is the final judge of the wine experience It includes practical tips for a scientifically informed wine tasting and closes with a delightful account of Shepherd s experience tasting classic Bordeaux vintages with French winemaker Jean Claude Berrouet of the Chateau Petrus and Dominus Estate

Introduction to the Chemistry of Food Michael Zeece,2020-01-30 Introduction to the Chemistry of Food describes the molecular composition of food and the chemistry of its components It provides students with an understanding of chemical and biochemical reactions that impact food quality and contribute to wellness This innovative approach enables students in food science nutrition and

culinology to better understand the role of chemistry in food Specifically the text provides background in food composition demonstrates how chemistry impacts quality and highlights its role in creating novel foods Each chapter contains a review section with suggested learning activities Text and supplemental materials can be used in traditional face to face distance or blended learning formats Describes the major and minor components of food Explains the functional properties contributed by proteins carbohydrates and lipids in food Explores the chemical and enzymatic reactions affecting food attributes color flavor and nutritional quality Describes the gut microbiome and influence of food components on its microbial population Reviews major food systems and novel sources of food protein

Multisensory Flavor Perception Betina

Piqueras-Fiszman, Charles Spence, 2016-04-14 Multisensory Flavor Perception From Fundamental Neuroscience Through to the Marketplace provides state of the art coverage of the latest insights from the rapidly expanding world of multisensory flavor research The book highlights the various types of crossmodal interactions such as sound and taste and vision and taste showing their impact on sensory and hedonic perception along with their consumption in the context of food and drink The chapters in this edited volume review the existing literature also explaining the underlying neural and psychological mechanisms which lead to crossmodal perception of flavor The book brings together research which has not been presented before making it the first book in the market to cover the literature of multisensory flavor perception by incorporating the latest in psychophysics and neuroscience Authored by top academics and world leaders in the field Takes readers on a journey from the neurological underpinnings of multisensory flavor perception then presenting insights that can be used by food companies to create better flavor sensations for consumers Offers a wide perspective on multisensory flavor perception an area of rapidly expanding knowledge

Cooked Michael Pollan, 2013-04-23 Michael Pollan the bestselling author of The

Omnivore s Dilemma Food Rules and How to Change Your Mind explores the previously uncharted territory of his own kitchen in Cooked Cooked is now a Netflix docuseries based on the book that focuses on the four kinds of transformations that occur in cooking Directed by Oscar winning filmmaker Alex Gibney and starring Michael Pollan Cooked teases out the links between science culture and the flavors we love In Cooked Pollan discovers the enduring power of the four classical elements fire water air and earth to transform the stuff of nature into delicious things to eat and drink Apprenticing himself to a succession of culinary masters Pollan learns how to grill with fire cook with liquid bake bread and ferment everything from cheese to beer Each section of Cooked tracks Pollan s effort to master a single classic recipe using one of the four elements A North Carolina barbecue pit master tutors him in the primal magic of fire a Chez Panisse trained cook schools him in the art of braising a celebrated baker teaches him how air transforms grain and water into a fragrant loaf of bread and finally several mad genius fermentos a tribe that includes brewers cheese makers and all kinds of picklers reveal how fungi

and bacteria can perform the most amazing alchemies of all The reader learns alongside Pollan but the lessons move beyond the practical to become an investigation of how cooking involves us in a web of social and ecological relationships Cooking above all connects us The effects of not cooking are similarly far reaching Relying upon corporations to process our food means we consume large quantities of fat sugar and salt disrupt an essential link to the natural world and weaken our relationships with family and friends In fact Cooked argues taking back control of cooking may be the single most important step anyone can take to help make the American food system healthier and more sustainable Reclaiming cooking as an act of enjoyment and self reliance learning to perform the magic of these everyday transformations opens the door to a more nourishing life

On the Scent Paolo Pelosi, 2016-03-24 In humans the perception of odours adds a fourth dimension to life from the scent of flowers the aroma of foods and all the subtle smells in the environment But how many types of odours can we distinguish Why do we like the food we like Which are the most powerful odorants and how well does the human sense of smell perform compared with that of a dog or a butterfly The sense of smell is highly complex and such complexity discouraged scientists for a long time leaving the world of smell in an atmosphere of mystery Only recently thanks to the new tools furnished by molecular biology and neuroscience are we beginning to answer these questions uncovering the hidden secrets of our sense of smell and decoding the language used by most animals to communicate In this book Paolo Pelosi one of the leading figures in the development of the science of olfaction recounts how the chemical alphabet behind smell has been pieced together over the past three decades Drawing on anecdotes from his own scientific career and celebrating the rich variety of smells from herbs to flowers to roast coffee and freshly baked bread he weaves together an engaging and remarkable account of the science behind the most elusive of our senses

Perception and Its Modalities Dustin Stokes, Mohan Matthen, Stephen Biggs, 2014-08-28 This volume is about the many ways we perceive In nineteen new essays philosophers and cognitive scientists explore the nature of the individual senses how and what they tell us about the world and how they interrelate They consider how the senses extract perceptual content from receptor information and what kinds of objects we perceive and whether multiple senses ever perceive a single event Questions pertaining to how many senses we have what makes one sense distinct from another and whether and why distinguishing

senses may be useful feature prominently Contributors examine the extent to which the senses act in concert rather than as discrete modalities and whether this influence is epistemically pernicious neutral or beneficial Many of the essays engage with the idea that it is unduly restrictive to think of perception as a collation of contents provided by individual sense modalities Rather contributors contend that to understand perception properly we need to build into our accounts the idea that the senses work together In doing so they aim to develop better paradigms for understanding the senses and thereby to move toward a better understanding of perception

The Custom-Made Brain Jean-Didier Vincent,Pierre-Marie Lledo,2014-06-03 Two leading neuroscientists introduce the concepts of cerebral plasticity and the regenerating brain describing what we know now about the processes through which the brain constantly reconstructs itself and the potential benefits this knowledge might have in addressing concerns for neurological cognitive and emotional health The authors begin with a survey of the fundamental scientific developments that led to our current understanding of the regenerative mind elucidating some of the breakthrough neurobiological studies that paved the way for our present understanding of the brain s plasticity and regenerative capabilities They then discuss the application of these findings to such issues as depression dyslexia schizophrenia and cognitive therapy incorporating the latest technologies in neuroimaging optogenetics and nanotechnology Their work shows the brain is anything but a static organ ceasing to grow as human beings become adults Rather the brain is dynamic evolving organically in relation to physical cultural historical and affective stimuli a plasticity that provides great hope to survivors of trauma and degenerative disorders

Biophysics Of Consciousness: A Foundational Approach Roman R Poznanski,Jack A Tuszynski,Todd E Feinberg,2016-08-25 The problem of how the brain produces consciousness subjectivity and something it is like to be remains one of the greatest challenges to a complete science of the natural world While various scientists and philosophers approach the problem from their own unique perspectives and in the terms of their own respective fields Biophysics of Consciousness A Foundational Approach attempts a consilience across disparate disciplines to explain how it is possible that an objective brain produces subjective experience This volume unites the cr me de la cr me of physicists neuroscientists and psychiatrists in the attempt to understand consciousness through a foundational approach encompassing

ontological evolutionary neurobiological and Freudian interpretations with the focus on conscious phenomena occurring in the brain By integrating the perspectives of these diverse disciplines with the latest research and theories on the biophysics of the brain the book tries to explain how consciousness can be an adaptive and causal element in the natural world **The Aesthetics of Food** Kevin W. Sweeney, 2017-12-29 The Aesthetics of Food sets out the continuing philosophical debate about the aesthetic nature of food The debate begins with Plato's claim that only objects of sight and hearing could be beautiful consequently food as something we smell and taste could not be beautiful Plato's sceptical position has been both supported and opposed in one form or another throughout the ages This book demonstrates how the current debate has evolved and critically assesses that debate showing how it has been influenced by the changing nature of critical theory and changes in art historical paradigms Expressionism Modernism and Post modernism as well as by recent advances in neuroscience It also traces changes in our understanding of the sensory experience of food and drink from viewing taste as a simple single sense to current views on its complex multi sensory nature Particular attention is paid to recent philosophical discussion about wine whether an interest in a wine reflects only a subjective or personal preference or whether one can make objective judgments about the quality and merit of a wine Finally the book explores how the debate has been informed by changes in the cooking presenting and consuming of food for example by the appearance of the restaurant in the early nineteenth century as well as the rise of celebrity chefs **Suburban Dreams** Greg Dickinson, 2015-06-15 Explores how the suburban imaginary composed of the built environment and imaginative texts functions as a resource for living out the good life
