Hemostasis in Head and Neck Surgery, An Issue of Otolaryngologic Clinics of North America Carl H. Snyderman, Harshita Pant, 2016-07-06 Bleeding is a major factor that hinders visualization in head and neck surgery and is a risk factor for intraoperative complications and perioperative morbidity Endoscopic approaches also pose significant technical challenges to managing expected intraoperative bleeding and vascular injury The approach for this publication in Otolaryngologic Clinics is to provide clinically relevant information in a problem based manner that encompasses assessment to identify patients with a high risk for vascular complications pre operative intra operative and post operative strategies to manage expected bleeding and major vessel injury during endoscopic sinus and skull base surgery for inflammatory and neoplastic diseases Clinically relevant anatomy physiology pharmacology and surgical and interventional radiology techniques to manage bleeding are outlined and an algorithm for management of major vessel injury such as internal carotid artery injury is presented Because skull base surgery is generally undertaken as a team approach this information is relevant to the subspecialized ENT surgeon from rhinology or head and neck specializations to neurosurgeons to interventional radiologists and to neurophysiologists who monitors intraoperative cerebral and cranial nerve activity for these operations Carl Snyderman leads this issue with Harshita Pant and has composed topics and assembled an expert group of practitioners to provide information The reader will find this a novel focused and indispensable resource on all issues of hemostasis in head and neck surgery

Neurointerventional Management Robert W. Hurst, Robert H. Rosenwasser, 2012-04-18. Crossing the boundaries of classically delineated medical and surgical specialties including neurosurgery, neuroradiology and neurology. Neurointervention in the Medical Specialties Randall C. Edgell, Sean I. Savitz, John Dalfino, 2016-09-22. Neurointervention in the Medical Specialties is a first of its kind reference that serves as a bridge between the neurointerventionalist and the physicians who most frequently look to these specialists for answers to some of the most intractable problems they face. Providing background on the wide range of diseases treated through neurointervention along with the indications and alternatives to such treatments, this landmark title is grouped into four parts: an introduction to the tools and anatomical structures that are integral to the field; disease processes most often encountered by neurologists, cardiologists and vascular surgeons; those diseases more frequently treated by neurosurgeons; and finally those diseases first seen by several other specialties including ophthalmologists and head and neck surgeons. Importantly, each chapter includes details of neurointerventional technique and case discussions that are sufficiently detailed to provide a treatment template and guidance to neurointerventionalists in training and practice. At the same time, the descriptions provide referring physicians with insight into how neurointerventional procedures are performed. Finally, there are several concluding, thought provoking chapters that examine what new opportunities await the field of neurointervention on the horizon. Neurointervention in the Medical Specialties is a major contribution to the literature and invaluable resource for all clinicians and researchers interested in this exciting field.
