GENERAL INFORMATION

The hydraulic system provides hydraulic oil to the boom and bucket, and the return oil provides charge oil for the hydrostatic drive system. On skid steers equipped with the auxiliary boom hydraulic kit, system oil will be provided to quick couplers at the front of the boom to operate hydraulic attachments. The hydraulic system is an open center type system. The gear pump provides continuous oil flow through the system to the boom, bucket circuits, auxiliary boom circuit, if equipped, and the hydrostatic drive charge circuit.

A open center system means the first control valve function has priority over the next function in line.

NOTE: The return oil must follow the normal return path from the control valve to the oil cooler/filter and back to the hydrostatic charge pressure inlet on the transmissions or severe damage to the hydrostatic system may occur.

Figure 1 shows the hydraulic circuit and components for the L175 and C175 skid steers.

The hydraulic system is built with the following components and their location.

1. Hydraulic reservoir - Right front of engine compartment
2. Suction line - From reservoir to the gear pump under operator's seat
3. Gear pump - Under the operator's seat
4. Pressure line - From gear pump to control valve
5. Control valve (three spool) - Under operator's seat shield
6. Main system relief valve - In control valve
7. Return line - From control valve to oil cooler
8. Oil cooler - Engine side of radiator in engine compartment
9. Filter - Right rear of engine compartment through rear door
10. Charge check valve - After filter and before the reservoir
11. Bucket cylinders
12. Boom cylinders
13. Auxiliary boom hydraulics
14. Optional high flow kit - Dealer installed kit - Refer to Section 88 - "Accessories" for more information.
