In the last two decades numerous advances have been made in this field which will bring nanomedicine closer to the clinic and bring new therapeutic options for the treatment of brain diseases which have proved challenging to treat. Such advancements include improvements in the novel design of nanoparticles with tissue compatibility, versatile loading capacity, BBB penetration ability, and greater target specificity.

Applications for Advancing Animal Ecology Michael L. Morrison, Leonard A. Brennan, Bruce G. Marcot, William M. Block, Kevin S. McKelvey, 2021-05-11. Practical guidance for wildlife professionals working to improve study design, data analysis, and the application of results to habitat and population management. Winner of the Wildlife Society Publications Book Award by The Wildlife Society. Despite major advances in sampling techniques and analytical methods, many animal ecologists conduct research that is primarily relevant to a specific time and place. They also tend to focus more on the statistical analyses and nuances of modeling than actual study design. Arguing that studies of animal ecology should always begin with a focus on the behaviors and characteristics of individual organisms, including how they form into distinct biological populations, *Applications for Advancing Animal Ecology* takes a fresh and critical look at the field. Building from its companion volume *Foundations for Advancing Animal Ecology*, this practical book presents readers with the principal methods used to observe animal behavior, teaching them to assess resource abundance, categories of species, environmental relationships, models, etc. It also explores major aspects of measuring animal habitat, what to measure, and how to measure it; common sampling and estimation methods to assess population parameters; when to measure and how to analyze data; problems that will confront ecologists in the coming years; and how to gather information to adequately address them. And how the experimental approach can be used to advance the science of animal ecology. Throughout the book, the authors stress the importance of speaking a common and well-defined language. Avoiding vague and misleading terminology, they assert will help ecologists translate science into meaningful and lasting actions in the environment. Taking the perspective of the organism of interest in developing concepts and applications, the authors always keep the potentially biased human perspective in focus. They also provide a selection of suggested research projects, cautions, and caveats. A major advancement in understanding the factors underlying wildlife habitat relationships, *Applications for Advancing Animal Ecology* will be an invaluable resource to natural resource management professionals and practitioners, including state and federal agencies, non-governmental organizations, and environmental consultants.

WHO recommendations on choice of antiseptic agent and method of application for preoperative skin preparation for caesarean section, 2021-06-18 There was a lack of evidence to recommend a specific concentration of chlorhexidine gluconate however most trials included used 2% chlorhexidine gluconate in 70% alcohol Maternal allergy to alcohol based chlorhexidine gluconate must be excluded before surgery In women with no previous history of allergy to alcohol based chlorhexidine gluconate it should be noted that chlorhexidine gluconate can

cause skin irritation A standard preoperative skin preparation technique that is appropriate for the intended skin incision must be followed As alcohol is highly flammable alcohol based antiseptic preparations may ignite if used in the presence of diathermy and they must be allowed to dry by evaporation It is advisable to ensure that the drapes are not saturated with alcohol or that the alcohol based solution has not formed a pool underneath the woman before starting surgery Particular care should be taken at emergency caesarean section Where chlorhexidine gluconate is not available other antiseptic agent such as povidone iodine can be considered a suitable antiseptic agent for preoperative skin preparation although it is not as effective as alcohol based chlorhexidine gluconate The Guideline Development Group noted that the current recommendation is consistent with the 2016 WHO global guidelines on the prevention of surgical site infection which recommends chlorhexidine gluconate alcohol based antiseptic solutions for surgical site skin preparation in individuals undergoing surgical procedures
