Teaching the World's Teachers Lauren Lefty, James W. Fraser, 2020-07-07 Examining teacher education in an international context this book captures the diversity of the world's educators. Many countries confront surprisingly similar challenges in preparing K-12 educators for success while national contexts also make for surprising differences. In *Teaching the World's Teachers*, education historians Lauren Lefty and James W. Fraser and their contributors make a convincing case for approaching these shared challenges from a more global and historically minded perspective. Written by education scholars from eleven different countries: Argentina, Brazil, Catalonia, Spain, China, England, Finland, Ghana, Israel, Singapore, South Africa, and the United States, this book provides histories of teacher education reforms between roughly 1980 and 2020. The authors show how international trends that emerged during this period collided with national and regional contexts to produce unique teacher education systems in different nations. While in some countries the embrace of markets and competition led to a deregulation of the teacher preparation field, in others teaching became a highly regulated and centralized affair. At the same time, ideas and structural models cross borders and education leaders borrow from each other while reshaping plans in each place. Opening with a broad historical overview of global teacher education models beginning in the late eighteenth century, *Teaching the World's Teachers* argues that the field has long been characterized by cross-border connections but shaped by geopolitical hierarchies of power. In an era when teacher quality is widely recognized as one of the most important factors in a child's education, this volume encourages dialogue among teacher educators and policymakers around the world. By understanding the context and contingency of where we have been, the authors hope that readers will walk away with a more empowered sense of where we are headed in the all-important task of teaching the world's teachers. Costa, Marcel Danesi, Dragana Martinovic, 2020-12-10 This book brings together ideas from experts in cognitive science mathematics and mathematics education to discuss these issues and to present research on how mathematics and its learning and teaching are evolving in the Information Age Given the ever broadening trends in Artificial Intelligence and the processing of information generally the aim is to assess their implications for how math is evolving and how math should now be taught to a generation that has been reared in the Information Age It will also look at the ever spreading assumption that human intelligence may not be unique an idea that dovetails with current philosophies of mind such as posthumanism and transhumanism The role of technology in human evolution has become critical in the contemporary world Therefore a subgoal of this book is to illuminate how humans now use their sophisticated technologies to chart cognitive and social progress Given the interdisciplinary nature of the chapters this will be of interest to all kinds of readers from mathematicians themselves working increasingly with computer scientists to cognitive scientists who carry out research on mathematics cognition and teachers of mathematics in a classroom

PREVIOUS EDITIONS This book seems like an essential reference for the experts which I am not. More importantly, this is an interesting book for the curious which I am. In this case, you will probably learn many interesting things from this book. If you teach numerical analysis or approximation theory, then this book will give you some good examples to discuss in class.

MAA Reviews Review of Second Edition The rich content of ideas sketched or presented in some detail in this book is supplemented by a list of over three hundred references, most of them of 1980 or more recent. The book also contains some relevant typical programs.

Zentralblatt MATH Review of Second Edition I think that the book will be very valuable to students both in numerical analysis and in computer science. I found it to be well written and containing much interesting material, most of the time disseminated in specialized papers published in specialized journals, difficult to find.
