**Foundations of Linear and Generalized Linear Models** Alan Agresti, 2015-01-15 A valuable overview of the most important ideas and results in statistical modeling Written by a highly experienced author Foundations of Linear and Generalized Linear Models is a clear and comprehensive guide to the key concepts and results of linear statistical models The book presents a broad in depth overview of the most commonly used statistical models by discussing the theory underlying the models R software applications and examples with crafted models to elucidate key ideas and promote practical model building The book begins by illustrating the fundamentals of linear models such as how the

model fitting projects the data onto a model vector subspace and how orthogonal decompositions of the data yield information about the effects of explanatory variables Subsequently the book covers the most popular generalized linear models which include binomial and multinomial logistic regression for categorical data and Poisson and negative binomial loglinear models for count data Focusing on the theoretical underpinnings of these models Foundations of Linear and Generalized Linear Models also features An introduction to quasi likelihood methods that require weaker distributional assumptions such as generalized estimating equation methods An overview of linear mixed models and generalized linear mixed models with random effects for clustered correlated data Bayesian modeling and extensions to handle problematic cases such as high dimensional problems Numerous examples that use R software for all text data analyses More than 400 exercises for readers to practice and extend the theory methods and data analysis A supplementary website with datasets for the examples and exercises An invaluable textbook for upper undergraduate and graduate level students in statistics and biostatistics courses Foundations of Linear and Generalized Linear Models is also an excellent reference for practicing statisticians and biostatisticians as well as anyone who is interested in learning about the most important statistical models for analyzing data

*Type 2 Diabetes* Robert Fried,Richard M. Carlton,2018-10-25

Approximately 29 million Americans are diagnosed with Type 2 diabetes annually Of that number only about 36 percent 10 44 million diabetes sufferers achieve satisfactory medical outcomes and would need additional help rarely available to reliably control their glucose levels Contrary to popular belief although anti diabetic medications can lower sugar levels nevertheless they have a poor performance track record because inflammation in the blood vessels persists This book details recent scientific findings that cardiovascular kidney vision peripheral nervous system and other body damage caused by chronic high levels of blood sugar hyperglycemia in Type 2 diabetes is actually due to excessive generation of unopposed free radicals and reactive oxygen species ROS These in turn cause chronic systemic inflammation and dysfunction of the endothelial lining of the arterial blood vessels jeopardizing the formation of the protective molecule nitric oxide NO thus severely impairing the blood supply to every organ and tissue in the body This book also catalogues the evidence that chronic hyperglycemia causes profound and often irreversible damage even long before Type 2 diabetes has been diagnosed In addition because conventional prescription treatments are unfortunately often inadequate the book details evidence based complementary means of blood sugar control
