Oceanography From Space Revisited:

Oceanography from Space J. F. Gower, 2013-03-07 This volume is based on the proceedings of the COSPAR SCOR IUCRM Symposium Oceanography From Space held in May 1980 in Venice Italy COSPAR The Committee for Space Research suggested holding a joint symposium with SCOR The Scientific Committee for Oceanic Research as a major review of space oceanography Since this meeting fitted well with a series of colloquia organized by the IUCRM The Inter Union Commission on Radio Meteorology these three bodies joined in sponsoring the meeting The conference was held 16 years after the first discussions of possible spaceborne observations of the ocean at a meeting organized in 1964 in Woods Hole Gifford Ewing was then keen to see oceanography benefit from the new satellite technology being developed and he begins this volume by noting that most of the suggestions put forward in 1964 have now at last been successfully demonstrated in practice The papers that follow show the variety of measurement techniques available or possible and many of the types of studies in which they can be used Papers are arranged in a general section and in 6 specialized sections each of which starts with a brief introduction summarizing important results

Oceanography from Space Vittorio Barale, J.F.R. Gower, L. Alberotanza, 2010-04-26 To all those sailors Who dreamed before us Of another way to sail the oceans The dedication of this Volume is meant to recall and honour the bold pioneers of ocean exploration ancient as well as modern As a marine scientist dealing with the oceans through the complex tools, methods and mechanisms of contemporary research I have always wondered what it was like in centuries past to look at that vast horizon with the naked eye not knowing what was ahead and yet to sail on I have tried to imagine what ancient sailors felt when the unknown swirls around and engulfs the mind as a forgotten author simply described the brave perhaps reckless act of facing such a hostile menacing and yet fascinating adventure Innovation has always been the key element I think for their success another way a better way a more effective safer and worthier way was the proper answer to the challenge The map of our world has been changed time and again from the geographical as well as the social economic and scientific points of view by the new discoveries of those sailors One of the positive qualities of human beings is without doubt the inborn desire to expand their horizons to see what lies beyond to learn and understand

Coral Reef Remote Sensing James A. Goodman,Samuel J. Purkis,Stuart R. Phinn,2013-04-18 Remote sensing stands as the defining technology in our ability to monitor coral reefs as well as their biophysical properties and associated processes at regional to global scales With overwhelming evidence that much of Earth's reefs are in decline our need for large scale repeatable assessments of reefs has never been so great Fortunately the last two decades have seen a rapid expansion in the ability for remote sensing to map and monitor the coral reef ecosystem its overlying water column and surrounding environment Remote sensing is now a fundamental tool for the mapping monitoring and management of coral reef ecosystems Remote sensing offers repeatable quantitative assessments of habitat and environmental characteristics over

spatially extensive areas As the multi disciplinary field of coral reef remote sensing continues to mature results demonstrate that the techniques and capabilities continue to improve New developments allow reef assessments and mapping to be performed with higher accuracy across greater spatial areas and with greater temporal frequency The increased level of information that remote sensing now makes available also allows more complex scientific questions to be addressed As defined for this book remote sensing includes the vast array of geospatial data collected from land water ship airborne and satellite platforms The book is organized by technology including visible and infrared sensing using photographic multispectral and hyperspectral instruments active sensing using light detection and ranging LiDAR acoustic sensing using ship autonomous underwater vehicle AUV and in water platforms and thermal and radar instruments Emphasis and Audience This book serves multiple roles It offers an overview of the current state of the art technologies for reef mapping provides detailed technical information for coral reef remote sensing specialists imparts insight on the scientific questions that can be tackled using this technology and also includes a foundation for those new to reef remote sensing The individual sections of the book include introductory overviews of four main types of remotely sensed data used to study coral reefs followed by specific examples demonstrating practical applications of the different technologies being discussed Guidelines for selecting the most appropriate sensor for particular applications are provided including an overview of how to utilize remote sensing data as an effective tool in science and management The text is richly illustrated with examples of each sensing technology applied to a range of scientific monitoring and management questions in reefs around the world As such the book is broadly accessible to a general audience as well as students managers remote sensing specialists and anyone else working with coral reef ecosystems
