### **Protective Immune Response to Dengue**

**Virus Infection and Vaccines: perspectives from the field to the bench** Simona Zompi, Scott Halstead, 2015-04-14

Dengue is the most important mosquito transmitted viral disease in humans Half of the world population is at risk of infection mostly in tropical and sub tropical areas The World Health Organization WHO estimates that 50 to 100 million infections occur yearly with 50 000 to 100 000 deaths related to dengue mainly in children Recent estimates show higher numbers up to three times more with 390 million estimated dengue infections per year among which 96 million apparent infections Bhatt et al 2013 Initially localized to South East Asia dengue virus DENV started its spread in Latin America in the 80 s Little is known about DENV spread in Africa but multiple seroprevalence surveys over several years are now clearly showing endemic areas in East and West Africa Brady et al 2013 Finally due to global warming and intense traveling there is a risk of global spread towards more temperate regions and both US Key islands FL and southern Europe recently faced DENV outbreaks There are currently no specific treatments or vaccines available Even though several dengue vaccines are in the pipeline clear correlates of protection are still lacking The recent failure of the live attenuated Sanofi vaccine Phase 2b trial Sabchareon et al 2013 and the lack of correlation between clinical protection and in vitro neutralization assays clearly underlines the necessity to better understand the role of the different components of the immune system in protection against dengue virus infection and the requirement for the development of additional and or improved predictive assays The aim of this research topic is to provide novel data opinions and literature reviews on the best immune correlates of protection and recent advances in the immune response to DENV infection that can allow rapid progress of dengue vaccines Authors can choose to submit original research papers reviews or opinions on pre clinical or clinical observations that will help unify the field with perspectives from epidemiology virology immunology and vaccine developers This research topic will discuss different aspects of the protective immune response to DENV that can influence vaccine development It will include a review of epidemiological data generated in the field which will address spatio temporal diversity of DENV epidemics the importance of cross reactive protection and of the time interval between infections as a predictor of disease It will further include a

review of the role of both the innate and adaptive immunity in DENV infection control and discuss the usefulness of new improved animal models in dissecting the role of each immunological compartment which will help define new correlate of immune protection New data concerning the DENV structure and anti dengue antibody structure will address the necessity of improved neutralization assays The ultimate test to prove vaccine efficacy and study immune correlates of protection in humans before large trials will open up the discussion on human DENV challenges using controlled attenuated viral strains Finally the role of vaccines administered in flavi immune populations in the modification of future epidemics will also be approached and will include novel studies on mosquitoes infection thresholds

**Cultural Sustainability** Torsten Meireis, Gabriele Rippl, 2018-09-03 If the political and social benchmarks of sustainability and sustainable development are to be met ignoring the role of the humanities and social cultural and ethical values is highly problematic People's worldviews beliefs and principles have an immediate impact on how they act and should be studied as cultural dimensions of sustainability Collating contributions from internationally renowned theoreticians of culture and leading researchers working in the humanities and social sciences this volume presents an in depth interdisciplinary discussion of the concept of cultural sustainability and the public visibility of such research Beginning with a discussion of the concept of cultural sustainability it goes on to explore its interaction with philosophy theology sociology economics arts and literature In doing so the book develops a much needed concept of culture that can be adapted to various disciplines and applied to research on sustainability Addressing an important gap in sustainability research this book will be of great interest to academics and students of sustainability and sustainable development as well as those studying sustainability within the humanities and social sciences such as cultural studies ethics theology sociology literature and history

**Pattern Recognition Receptors and Cancer** Anton G. Kutikhin, Arseniy E. Yuzhalin, 2015-10-08 The group of pattern recognition receptors PRRs includes families of Toll like receptors TLRs NOD like receptors NLRs C type lectin receptors CLRs RIG I like receptors RLRs and AIM 2 like receptors ALRs Conceptually receptors constituting these families are united by two general features Firstly they directly recognize common antigen determinants of virtually all classes of pathogens so called pathogen associated molecular patterns or simply PAMPs and initiate immune response against them via specific intracellular signaling pathways Secondly they recognize endogenous ligands since they are usually released during cell stress they are called damage associated molecular patterns DAMPs and hence PRR mediated immune response can be activated without an influence of infectious agents So pattern recognition receptors play the key role performing the innate and adaptive immune response In addition many PRRs have a number of other vital functions apart from participation in immune response realization The fundamental character and diversity of PRR functions have led to amazingly rapid research in this field Such investigations are very promising for medicine as immune system plays a key role in vast majority if not all human diseases and the process of discovering the new aspects of the immune system functioning is rapidly ongoing The role of Toll like receptors in cancer was

analyzed in certain reviews but the data are still scattered This collection of reviews systematizes the key information in the field

**The Economics of Belonging** Martin Sandbu, 2022-05-17 A radical new approach to economic policy that addresses the symptoms and causes of inequality in Western society today Fueled by populism and the frustrations of the disenfranchised the past few years have witnessed the widespread rejection of the economic and political order that Western countries built up after 1945 Political debates have turned into violent clashes between those who want to take their country back and those viewed as defending an elitist broken and unpatriotic social contract There seems to be an increasing polarization of values The Economics of Belonging argues that we should step back and take a fresh look at the root causes of our current challenges In this original engaging book Martin Sandbu argues that economics remains at the heart of our widening inequality and it is only by focusing on the right policies that we can address it He proposes a detailed radical plan for creating a just economy where everyone can belong Sandbu demonstrates that the rising numbers of the left behind are not due to globalization gone too far Rather technological change and flawed but avoidable domestic policies have eroded the foundations of an economy in which everyone can participate and would have done so even with a much less globalized economy Sandbu contends that we have to double down on economic openness while pursuing dramatic reforms involving productivity regional development support for small and medium sized businesses and increased worker representation He discusses how a more active macroeconomic policy education for all universal basic income and better taxation of capital could work together for society's benefit Offering real answers not invective for facing our most serious political issues The Economics of Belonging shows how a better economic system can work for all

*Dynamics of cyclic nucleotide signaling in neurons* Pierre Vincent, Nicholas C. Spitzer, 2015-09-16 Cyclic nucleotides control a number of neuronal properties including neuronal differentiation pathfinding regulation of excitability and synaptic transmission and control of gene expression Signaling events mediated by cAMP or cGMP are transient and take place within the complex 3 dimensional structure of the neuronal cell Signaling events happen on the time scale of seconds to minutes and the biological significance of the temporal dimension remains poorly understood Structural features of neurons dendritic spines and branches cell body nucleus axon as well as AKAPs and other scaffolding proteins that keep signaling enzymes

together and form signaling microdomains are critical spatial determinants of signal integration Finally the types of enzymes involved in signal integration which are expressed as a number of different types and splice variants yield another dimension that determines signal integration properties Biosensor imaging provides direct temporal and spatial measurement of intracellular signals This novel approach together with more conventional methods such as biochemistry electrophysiology and modeling now provide a better understanding of the spatial and temporal features of cyclic nucleotide signal integration in living neurons This topic aims at providing a better understanding of how neurons are making sense of cyclic nucleotide signaling in living neurons
