Climate Change 2021 - The Physical Science Basis Intergovernmental Panel on Climate Change (IPCC), 2023-07-26
The Working Group I contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provides a comprehensive assessment of the physical science basis of climate change. It considers in situ and remote observations, paleoclimate information, understanding of climate drivers and physical, chemical and biological processes and feedbacks, global and regional climate modelling, advances in methods of analyses and insights from climate services. It assesses the current state of the climate, human influence on climate in all regions, future climate change including sea level rise, global warming effects including extremes, climate information for risk assessment and regional adaptation, limiting climate change by reaching net zero carbon dioxide emissions and reducing other greenhouse gas emissions and benefits for air quality. The report serves policymakers, decision makers, stakeholders and all interested parties with the latest policy relevant information on climate change. The green economy is widely seen as a potential solution to current global economic and environmental crises and a potential mechanism by which sustainable development might be achieved in practice. Considerable investments are now being made into the development of green technology, renewable energy, biodiversity conservation, resource efficiency, recycling of materials and green infrastructure. This textbook provides a comprehensive introduction to the green economy using a strongly interdisciplinary approach based on environmental science rather than treating it as a sub set of economics. The scientific principles of sustainability are presented which provide the foundations of

the green economy with a particular focus on systems based approaches Examples of real world case studies are used to illustrate how the green economy can be achieved in practice In this way the authors provide a thorough overview of both the principles and practice of the green economy drawing from a wide range of disciplines including ecology geography social science psychology sustainability science environmental science law and economics The emphasis is on presenting results of the latest research derived from leading scientific journals Rather than focusing on a single definition of what constitutes a green economy the book introduces readers to the diversity of opinion that exists and engages them in what is an active on going debate This reflects the fact that many aspects of the green economy and sustainable development more generally are currently contested In particular the book will help readers to strengthen their ability to critically evaluate the evidence for and against the views presented and to actively contribute to the future development of the green economy

Transformation Adam Bumpus,James Tansey,Blas Luis Pérez Henríquez,Chukwumerije Okereke,2014-07-17 Transformation

to a low carbon economy is a central tenet to any discussion on the solutions to the complex challenges of climate change and energy security. Despite advances in policy, carbon management and continuing development of clean technology, fundamental business transformation has not occurred because of multiple political, economic, social and organisational issues. Carbon Governance: Climate Change and Business Transformation is based on leading academic and industry input and three international workshops focused on low carbon transformation in leading climate policy jurisdictions: Canada, USA and the UK under the international Carbon Governance Project (CGP) banner. The book pulls insights from this innovative collaborative network to identify the policy combinations needed to create transformative change. It explores fundamental questions about how governments and the private sector conceptualize the problem of climate change, the conditions under which business transformation can genuinely take place and key policy and business innovations needed. Broadly, the book is based on emerging theories of multi-levelled, multi-actor carbon governance and applies these ideas to the real-world implications for tackling climate change through business transformation. Conceptually and empirically, this book stimulates both academic discussion and practical business models for low carbon transformation.

Science and the Global Environment Alan McIntosh, Jennifer Pontius, 2016-09-03. Case Studies for Integrating Science and the Global Environment is designed to help students of the environment and natural resources make the connections between their training in science and math and today's complex environmental issues. The book provides an opportunity for students to apply important skills, knowledge and analytical tools to understand, evaluate and propose solutions to today's critical environmental issues. The heart of the book includes four major content areas: water resources, the atmosphere and air quality, ecosystem alteration and global resources and human needs. Each of these sections features in-depth case studies covering a range of issues for each resource, offering rich opportunities to teach how various scientific disciplines help inform the issue at hand. Case studies provide readers with experience in interpreting real data sets and considering alternate explanations for trends shown by the data. This book helps prepare students for careers that require collaboration with stakeholders and co-workers from various disciplines. Includes global case studies using real data sets that allow readers to practice interpreting data and evaluating alternative explanations. Focuses on critical skills and knowledge, encouraging readers to apply science and math to real-world problems. Employs a system-based approach linking air, water and land resources to help readers understand that cause-effect may be complex and solutions to environmental problems require multiple perspectives. Includes special features such as links to video clips of scientists at work, boxed information, a solutions section at the end of each case study and practice exercises.

in the context of selected case studies taking legal literature in the field fully into account Given that the Chinese government is taking steps to reduce emissions by altering energy production and usage and is signalling a willingness to make similar commitments in a multilateral treaty it is very timely and important for lawmakers and scholars within and outside China to think about new and appropriate regulatory measures to respond to the crisis and plan for a sustainable future This study provides not only a useful benchmark for both China and other countries in formulating initiatives on enhancing climate protection but also details the global implications for governments and for international organizations concerned with the understanding between China and the rest of the world in the context of climate change mitigation Research Handbook on Climate Governance Karin Bäckstrand,Eva Lövbrand,2015-11-27 The 2009 United Nations climate conference in Copenhagen is often represented as a watershed in global climate politics when the diplomatic efforts to negotiate a successor agreement to the Kyoto Protocol failed and was replaced by a fragmented and decentralized climate governance order In the post Copenhagen landscape the top down universal approach to climate governance has gradually given way to a more complex hybrid and dispersed political landscape involving multiple actors arenas and sites The Handbook contains contributions from more than 50 internationally leading scholars and explores the latest trends and theoretical developments of the climate governance scholarship **Stranded Assets and the Environment** Ben Caldecott,2018-05-11 Drawing on the work of leading researchers and practitioners from a range of disciplines including economic geography economics economic history finance law and public policy this edited collection provides a comprehensive assessment of stranded assets and the environment covering the fundamental issues and debates including climate change and societal responses to environmental change as well as its origins and theoretical basis The volume provides much needed clarity as the discourse on stranded assets gathers further momentum In addition to drawing on scholarly contributions there are chapters from practitioners and analysts to provide a range of critical perspectives While chapters have been written as important standalone contributions the book is intended to systematically take the reader through the key dimensions of stranded assets as a topic of research inquiry and practice The work adopts a broad based social science perspective for setting out what stranded assets are why they are relevant and how they might inform the decision making of firms investors policymakers and regulators The topic of stranded assets is inherently multi disciplinary cross sectoral and multi jurisdictional and the volume reflects this diversity This book will be of great relevance to scholars practitioners and policymakers with an interest in include economics business and development studies climate policy and environmental studies in general *Ethics and climate change* ,2015-07-27 Climate change is the most significant moral and environmental issue of our time This project seeks to help deepen explicit ethical reflection around the world on national responses to climate change by developing a publicly available record on national compliance with ethical obligations for climate change similar to the reports that are now available on national compliance with human rights obligations *Advances in Energy,*
