Physical Science Paper November 2014:

What We Think About When We Try Not To Think About Global Warming Per Espen Stoknes, 2015 Today about 98 percent of scientists affirm that climate change is human made and about 2 percent still question it Despite that overwhelming majority though about half the population of rich countries like ours choose to believe the 2 percent And paradoxically this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades This disconnect has both climate scientists and activists scratching their heads growing anxious and responding usually by repeating more facts to win the argument But the more climate facts pile up the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead Is humanity up to the task It is a catch 22 that starts says psychologist and climate expert Per Espen Stoknes from an inadequate understanding of the way most humans think act and live in the world around them With dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task Publisher s description

Accidental Conflict Stephen Roach, 2022-11-08 The misguided forces driving conflict escalation between America and China and the path to a new relationship A timely fluid readable assessment of a testy and rapidly changing global relationship Kirkus Reviews starred review In the short span of four years America and China have entered a trade war a tech war and a new Cold War This conflict between the world s two most powerful nations wouldn t have happened were it not for an unnecessary clash of false narratives America falsely blames its trade and technology threats on China yet overlooks its shaky saving foundation China falsely blames its growth challenges on America s alleged containment of market based socialism ignoring its failed economic rebalancing In a hard hitting analysis of both nations economies politics and policies Stephen Roach argues that much of the rhetoric on both sides is dangerously misguided amplified by information

distortion and more a reflection of each nation's fears and vulnerabilities than a credible assessment of the risks they face

Outlining the disastrous toll of conflict escalation between China and America Roach offers a new road map to restoring a mutually advantageous relationship

Einstein's Entanglement W. M. Stuckey, Michael Silberstein, Timothy McDevitt, 2024-10-30 Einstein introduced quantum entanglement in 1935 and referred to it as spooky actions at a distance because it seemed to conflict with his theory of special relativity Today some refer to it as the greatest mystery in physics and the 2022 Nobel Prize in Physics was even awarded for experimental confirmation of the spookiness While the mystery is experimentally well established its solution remains elusive because it is commonly believed that quantum entanglement entails that quantum mechanics is incomplete that the world works according to spooky actions at a distance that causes from the future create effects in the present that there is superdeterministic causal control of experimental procedures that people can correctly disagree on the outcome of one and the same experiment and that a single experimental measurement can produce all possible outcomes In this book a rigorous solution to the mystery of quantum entanglement is provided that entails none of those things The key to this seemingly impossible feat is to use Einstein's own language a principle explanation that foregoes the need for any constructive explanation of quantum entanglement such as those listed above Ironically the proposed principle explanation is Einstein's own relativity principle as grounded in quantum information theory So contrary to popular belief quantum mechanics and special relativity are far from inconsistent as both are a consequence of the exact same relativity principle

Buckalew, 2015-11-24 The title follows from the original demonstration by Dr Hugh de Wardener in 1961 that a humoral agent is produced after extracellular volume expansion which results in a vigorous diuresis and natriuresis Thus the name of natriuretic hormone was coined In the years that followed several investigators pursued the

search for the hormone. What resulted however was the discovery of several hormones with different characteristics all of which were natriuretic. Initially it was found that the hormone was similar in action to ouabain or digoxin hence the appellation of ouabain like or digoxin like. The hormone was found to be an inhibitor of Na K ATPase which would fit with it being a cardiotonic steroid. On the other hand neither ouabain or digoxin migrated on Sephadex gel filtration in the same locus as the hormone. Other investigators claim to have identified the hormone initially as a vanadium diascorbate later as bufadienolides such as marinobufagenin yet later as a macrocyclic derivative of inorganic carbon suboxide with a molecular weight of 408 Da. Some support for the latter finding was derived from an earlier report that a semi purified Sephadex derived compound was found to have a molecular weight of about 12 000 Da but the active compound when split from its carrier protein had a molecular weight of exactly 408 Da. This compound had not been further identified. As further development was the demonstration by Bricker and colleagues that a natriuretic substance could be purified from uremic urine. This turned out to be a xathurenic acid derivative. Meanwhile the focus began to turn to natriuretic peptides derived from heart ANF and BNP. These peptides have a shorter duration of action than the cardiotonic steroid like hormone and ANF has proved to be most useful as a measure of heart failure. It should also be stressed that marinobufagenin like ANF is elevated in congestive heart failure whereas the steroid like hormone is depressed or absent in this state. This review will attempt to describe and contrast the properties of each of the proposed natriuretic hormones including their locus on Sephadex separation, potency, duration of action, chemical structure if known, behavior in hypertension, renal failure, heart failure and brain disease. As most recent work has focussed on marinobufagenin this hormone will be brought up to date by investigators in the field.

Research Handbook on Climate Governance Karin Bäckstrand, Eva Lövbrand, 2015-11-27. The 2009 United Nations climate conference in Copenhagen is often represented as a watershed in global climate politics when the diplomatic efforts to negotiate a successor agreement to the Kyoto Protocol failed and was replaced by a fragmented and decentralized climate governance order. In the post Copenhagen landscape the top down universal approach to climate governance has gradually given way to a more complex hybrid and dispersed political landscape involving multiple actors, arenas and sites. The Handbook contains contributions from more than 50 internationally leading scholars and explores the latest trends and theoretical developments of the climate governance scholarship.
