moments in Earth's deep past and their lessons for our future. The epic stories of our planet's 4.54 billion year history are written in strata: ages old remnants of ancient seafloors, desert dunes and riverbeds striping landscapes around the world. In this brilliantly original debut work, science writer Laura Poppick decodes strata to lead us on a journey through four global transformations that made our lives on Earth possible: the first accumulations of oxygen in the atmosphere, the deep freezes of Snowball Earth, the rise of mud on land and accompanying proliferation of plants, and the dinosaurs' reign on a hothouse planet. Poppick introduces us to the researchers who have devoted their careers to understanding the events of deep time, including the world's leading stegosaurus scientist. She travels to sites as various as a Minnesotan iron mine that runs half a mile deep and a corner of the Australian Outback where glacial deposits date from the coldest times on Earth. Ultimately, she demonstrates that the planet's oceans, continents, atmosphere, life, and ice have always conspired to bring stability to Earth, even if we are only just beginning to understand how these different facets interact. A work in the tradition of John McPhee, *Strata* allows us to observe how the planet has responded to past periods of environmental upheaval and shows how Earth's ancient narratives could hold lessons for our present and future. *Flame Retardants for Textile Materials* Asim Kumar Roy Choudhury, 2020-08-03

This book focuses on flame retardants (FR) for textile materials. It discusses basics of flame retardancy and flammability and covers various types of flame retardants and materials including natural FRs, halogen, phosphorous, and nanomaterial-based FRs. This book also discusses methods of applications of FRs and discusses FRs and the environment. Covers a variety of interdisciplinary applications in the textile industry. Emphasizes environmental aspects. Reports on a large number of FR compounds studied globally. Discusses in detail recent developments in halogen-free, eco-friendly flame retardants. Extensively describes basic aspects of flame retardancy and their measurements. Aimed at the practitioner and textile engineering professional, this work aims to ensure development of safe textile materials for various uses including apparel, protective wear, floor coverings, upholstery, drapery, and others.

November 2019 Monthly Current Affairs with MCQs for Competitive Exams Disha Experts, 2019-10-21 **The Patient Will See You Now** Eric Topol, 2016-10-25 The essential guide by one of America's leading doctors to how digital technology enables all of us to take charge of our health. A trip to the doctor is almost a guarantee of misery. You'll make an appointment months in advance. You'll probably wait for several hours until you hear the doctor will see you now, but only for fifteen minutes. Then you'll wait even longer for lab tests, the results of which you'll likely never see, unless they indicate further and more invasive tests, most of which will probably prove unnecessary, much like physicals themselves. And your bill will be astronomical. In *The Patient Will See You Now*, Eric Topol, one of the nation's top physicians, shows why medicine does not have to be that way. Instead, you could use your smartphone to get rapid test results from one drop of blood, monitor your vital signs both day and night, and use an artificially intelligent algorithm to receive a diagnosis without having to see a doctor, all at a small fraction of the cost imposed by our modern healthcare system. The change is powered by what Topol calls medicine's Gutenberg moment. Much as the printing

press took learning out of the hands of a priestly class the mobile internet is doing the same for medicine giving us unprecedented control over our healthcare With smartphones in hand we are no longer beholden to an impersonal and paternalistic system in which doctor knows best Medicine has been digitized Topol argues now it will be democratized Computers will replace physicians for many diagnostic tasks citizen science will give rise to citizen medicine and enormous data sets will give us new means to attack conditions that have long been incurable Massive open online medicine where diagnostics are done by Facebook like comparisons of medical profiles will enable real time real world research on massive populations There s no doubt the path forward will be complicated the medical establishment will resist these changes and digitized medicine inevitably raises serious issues surrounding privacy Nevertheless the result better cheaper and more human health care will be worth it Provocative and engrossing *The Patient Will See You Now* is essential reading for anyone who thinks they deserve better health care That is for all of us Smartphone Instrumentations for Public Health Safety Abbas Jamalipour,Md Arafat Hossain,2018-10-30 A significant and convenient approach to detection and analysis of biological environmental and agricultural items is the harnessing of features in widely available smartphones to create field deployable scientific instruments allowing measurements to be made onsite and in real time This book will cover a number of self contained smartphone instruments with the particular focus on spectroscopic based measurements Measurement and analysis on precision of such low cost instrumentations are provided to compare with more expensive commercial equipment This book also discusses some limitations possible recommendations and scopes for further instrumentations using smartphones and other smart devices Particularly the opportunity to integrate the devices into the global Internet of Things IoT platform will be discussed Researchers and instrumentation designers in optical and photonic sensing smart and IoT based sensing biological and environmental analysts agricultural and food quality researchers and public health authorities will find this book useful as reference Students in science and engineering disciplines for teaching and educational purposes will also find this book useful as a secondary textbook **Robert Le Rossignol** Deri Sheppard,2020-02-06 A principal aim of this first biography of Robert Le Rossignol engineer of the Haber process is to bring new evidence to the attention of the scientific community allowing a re assessment of the origins of the Haber process However the scope of the book is much wider and goes beyond the discovery of fixation to account for a life distinct from Haber one full of remarkable science cruel circumstance personal tragedy and amazing benevolence the latter made possible by Haber s generous financial arrangement with Le Rossignol regarding his royalties from the BASF *Megachange* Darrell M. West,2016-10-18 Big unexpected changes are here to stay Slow incremental change has become a relic of the past Today s shifts come fast and big what Darrell West calls megachanges in which dramatic disruptions in trends and policies occur on a regular basis Domestically we see megachange at work in the new attitudes and policies toward same sex marriage health care smoking and the widespread legalization of marijuana use Globally we have seen the extraordinary rise and then collapse of the Arab

Spring the emergence of religious zealotry the growing influence of nonstate actors the spread of ISIS fomented terrorism the rise of new economic and political powers in Asia and the fracturing of once stable international alliances Long held assumptions have been shattered and the proliferation of unexpected events is confounding experts in the United States and around the globe Many of the social and political institutions that used to anchor domestic and international politics have grown weak or are in need of dramatic reform What to do West says that we should alter our expectations about the speed and magnitude of political and social change We also need to recognize that many of our current governing processes are geared to slow deliberation and promote incremental change not large scale transformation With megachange becoming the new normal our domestic and global institutions must develop the ability to tackle the massive economic political and social shifts that we face

Exploration and Production of Oceanic Natural Gas Hydrate Michael D. Max, Arthur H. Johnson, 2016-08-16 This book describes aspects of the natural gas hydrate NGH system that offer opportunities for the innovative application of existing technology and development of new technology that could dramatically lower the cost of NGH exploration and production It is written for energy industry professionals and those concerned with energy choices and efficiencies at a university graduate level The NGH resource is compared with physical environmental and commercial aspects of other gas resources The authors theme is that natural gas can provide for base and peak load energy demands during the transition to and possibly within a renewable energy future This is possibly the most useful book discussing fossil fuels that will be a reference for environmentalists and energy policy institutions and for the environmental and energy community
