

INTRODUCTION

Congratulations. Your R.V. is equipped with the very latest and most advanced electrical control system. Your new electrical control center is designed as a combination distribution Panelboard/power converter. The distribution panelboard gives you overcurrent protection for all the 120 VAC wiring in your R.V. The power converter changes the incoming 120 VAC down to a safe 12 VDC to power your interior lights, fans, pumps, etc.

120 VAC PANELBOARD

On most R.V.'s the 120 VAC panelboard is equipped with a 30 amp main breaker and 3 or more branch circuit breakers. On some R.V.'s with only 2 branch circuit breakers there might not be a main 30 amp breaker. When you plug your R.V. into 120 VAC power the panelboard distributes the power to your air conditioner, power converter, refrigerator, and other 120 VAC receptacles and appliances throughout your coach.

POWER CONVERTER OPERATION ON 12 VOLT BATTERY

The power converter section of the electrical control center consists of the transformer module and the 12 volt distribution panel. The transformer module contains the individual 12 VDC fuses for all the circuits from the converter. The removable printed circuit board for the optional battery charger is also housed in the 12 volt panel. Your power converter might be equipped with an automatic or manual power change-over switch which is located in the 12 volt distribution panel. This automatic or manual output relay/change-over switch transfers R.V. power from the transformer to the R.V. battery. On converters equipped with the automatic power switch you will hear a clicking sound when you plug into 120 VAC power. The clicking sound tells you the converter is operating. On converters equipped with the manual power switch you will have to press the rocker switch to the TRANSFORMER position when you plug into 120 VAC power. When both the automatic power switch or the manual power switch are in the TRANSFORMER position, all the 12 volt lights, fans, etc. are operating directly from the transformer of the converter. In this condition the battery is held in reserve. The battery will be charged in this condition if the converter is equipped with the optional battery charger.

CHARGING WHILE DRIVING

All Progressive Dynamics electrical control centers are designed to allow charging of the R.V. battery by the alternator while driving. We recommend the use of our PD-741 or PD-742 dual battery hook-up kit to prevent accidental draining of the starting battery.
