Baldwin,2024-12-24 How the innate physical properties of different technologies influence the strategy and structure of the organizations implementing the technologies the sequel to Design Rules The Power of Modularity In Design Rules volume 2 Carliss Baldwin offers a comprehensive view of the digital economy by putting forth an original theory that explains how technology shapes organizations in a market economy The theory claims that complementarities arising from the physical nature of technologies can be arrayed on a spectrum ranging from strong to very weak Two basic types of technologies in turn exhibit different degrees of complementarity between their internal components Flow production technologies which are found in steel mills and auto factories specify a series of steps each of which is essential to the final product In contrast platform technologies which are characteristic of computer hardware software and networks are modular systems designed to provide options Baldwin then investigates the dynamics of strategy for firms in platform ecosystems Such firms create value by solving technical bottlenecks technical barriers to performance

that arise in different parts of the system as it evolves They capture value by controlling and defending strategic bottlenecks components that are 1 essential to the functioning of some part of the system 2 unique and 3 controlled by a profit seeking enterprise Strategic bottlenecks can be acquired by solving technical bottlenecks They can be destroyed via tactics such as substitution reverse engineering bypassing the bottleneck and enveloping a smaller bottleneck within a larger one Strategy in platform ecosystems can thus be viewed as the effective management of technical and strategic bottlenecks within a modular technical system

Assa Doron, Robin Jeffrey, 2013-04-02 In 2001 India had 4 million cell phone subscribers Ten years later that number had exploded to more than 750 million Over just a decade the mobile phone was transformed from a rare and unwieldy instrument to a palm sized affordable staple taken for granted by poor fishermen in Kerala and affluent entrepreneurs in Mumbai alike The Great Indian Phone Book investigates the social revolution ignited by what may be the most significant communications device in history one which has disrupted more people and relationships than the printing press wristwatch automobile or railways though it has qualities of all four In this fast paced study Assa Doron and Robin Jeffrey explore the whole ecosystem of the cheap mobile phone Blending journalistic immediacy with years of field research experience in India they portray the capitalists and bureaucrats who control the cellular infrastructure and wrestle over bandwidth rights the marketers and technicians who bring mobile phones to the masses and the often poor village bound users who adapt these addictive and sometimes troublesome devices to their daily lives Examining the challenges cell phones pose to a hierarchy bound country the authors argue that in India where caste and gender restrictions have defined power for generations the disruptive potential of mobile phones is even greater than elsewhere The Great Indian Phone Book is a rigorously researched multidimensional tale of what can happen when a powerful and readily available technology is placed in the hands of a large still predominantly poor population

frequent comment when Africans are asked about mobile phones They have become part and parcel of the communication landscape in many urban and rural areas of Africa and the growth of mobile telephony is amazing from 1 in 50 people being users in 2000 to 1 in 3 in 2008 Such growth is impressive but it does not even begin to tell us about the many ways in which mobile phones are being appropriated by Africans and how they are transforming or are being transformed by society in Africa This volume ventures into such appropriation and mutual shaping Rich in theoretical innovation and empirical substantiation it brings together reflections on developments around the mobile phone by scholars of six African countries Burkina Faso Cameroon Ghana Mali Sudan and Tanzania who explore the economic social and cultural contexts in which the mobile phone is being adopted adapted and harnessed by mobile Africa
