Life Cycle Assessment of Renewable Energy Sources Anoop Singh, Deepak Pant, Stig Irving Olsen, 2013-09-02

Governments are setting challenging targets to increase the production of energy and transport fuel from sustainable sources The emphasis is increasingly on renewable sources including wind solar geothermal biomass based biofuel photovoltaics or energy recovery from waste What are the environmental consequences of adopting these other sources How do these various sources compare to each other Life Cycle Assessment of Renewable Energy Sources tries to answer these questions based on the universally adopted method of Life Cycle Assessment LCA This book introduces the concept and importance of LCA in the framework of renewable energy sources and discusses the key issues in conducting their LCA This is followed by an in depth discussion of LCA for some of the most common bioenergy sources such as agricultural production systems for biogas and bioethanol biogas from grass biodiesel from palm oil biodiesel from used cooking oil and animal fat Jatropha biodiesel lignocellulosic bioethanol ethanol from cassava and sugarcane molasses residential photovoltaic systems wind energy microalgal biodiesel biohydrogen and biomethane Through real examples the versatility of LCA is well emphasized Written by experts all over the globe the book is a cornucopia of information on LCA of bioenergy systems and provides a platform for stimulation of new ideas and thoughts The book is targeted at practitioners of LCA and will become a useful tool for researchers working on different aspects of bioenergy

Sustainability Metrics and Indicators of Environmental Impact Eduardo Jacob-Lopes, Leila Queiroz Zepka, Mariany Costa Depra, 2021-07-16

Sustainability Metrics and Indicators of Environmental Impact Industrial and Agricultural Life Cycle Assessment covers trending topics on the environmental impact of systems of production putting emphasis on lifecycle assessment LCA This methodology is one of the most important tools of analysis as mathematical models are applied that will quantify the systematic inputs and outputs of the processes in order to evaluate the sustainability of industrial processes and products In this sense LCA is mainly a tool to support environmental decision making that analyzes the environmental impacts of products and technologies from a lifecycle perspective The emergence of ever larger global issues such as the energy dilemma the changing climate and the scarcity of natural resources such as water has boosted the search for tools capable of ensuring the reliability of the results published by the industries and has become an important tool in order to achieve sustainability and environmental preservation Thus lifecycle assessment LCA including carbon footprint valuation is necessary to ensure better internal management Provides guidance on environmental impacts and the carbon footprint of industrial processes Features guidelines in lifecycle assessment to support a sustainable approach along with quantifiable data to support proposed solutions Includes a companion website with slides and graphics to quantify environmental impact and other metrics of lifecycle assessment

Biology, 1996 **Study Guide to Accompany Biology: Life on Earth by Teresa Audesirk and Gerald Audesirk** David J. Cotter, 1986 Anaerobic Digestion Gavin Collins, Eric D. van Hullebusch, Giovanni Esposito, Cynthia Carliell-Marquet, Fernando G. Fermoso, 2018-11-27 Anaerobic digestion AD is a naturally occurring biological process in soils sediments ruminants and several other anoxic environments that cycles carbon and other nutrients and converts organic matter into a methane rich gas As a biotechnology AD is now well established for the treatment of the organic fraction of various waste materials including wastewaters but is also increasingly applied for an expanding range of organic feedstocks suitable for biological conversion to biogas AD applications are classified in various ways including on the basis of bioreactor

design and operating parameters such as retention time temperature pH total solids TS and volatile solids VS contents and biodegradability of substrates AD is an attractive bioenergy and waste wastewater treatment technology The advantages of AD for waste treatment include production of a useable fuel biogas methane possibility of high organic loading reduced carbon footprint and suitability for integration into a wide variety of process configurations and scales Specifically two important and developing applications exemplify the potential of AD technologies 1 the integration of AD as the basis of the core technologies underpinning municipal wastewater and sewage treatment to displace less sustainable and more energy intensive aerobic biological treatment systems in urban water infrastructures and 2 technical innovations for higher rate conversions of high solids wastestreams and feedstocks for the production of energy carriers i e methane biogas but possibly also biohydrogen and other industrially relevant intermediates such as organic acids Internationally the research effort to maximize AD biogas yield has increased ten fold over the past decade Depending on the feedstocks bioreactor design and process parameters fundamental and applied knowledge are still required to improve conversion rates and biogas yields This Research Topic cover aspects related to AD processes such as the effect of feedstock composition as well as the effect of feedstock pre treatment bioreactor design and operating modes on process efficiency microbial community dynamics and systems biology influence of macro and micro nutrient concentrations and availability process control upgrading and calibration of anaerobic digestion models e g ADM1 considering the biochemical routes as well as the hydrodynamics in such ecosystems and novel approaches to process monitoring such as the development and application of novel and rapid diagnostic assays including those based on molecular microbiology Detailed full scale application studies were also particularly welcomed

Far from Equilibrium: An archaeology of energy, life and humanity Michael J. Boyd, Roger C. P. Doonan, 2021-03-03 Archaeology is in crisis Spatial turns material turns and the ontological turn have directed the discipline away from its hard won battle to find humanity in the past Meanwhile popularised science camouflaged as archaeology produces shock headlines built on ancient DNA that reduce humanity's most intriguing historical problems to two dimensional caricatures Today archaeology finds itself less able than ever to proclaim its relevance to the modern world This volume foregrounds the relevance of the scholarship of John Barrett to this crisis Twenty four writers representing three generations of archaeologists scrutinise the current turmoil in the discipline and highlight the resolutions that may be found through Barrett's analytical framework Topics include archaeology and the senses the continuing problem of the archaeological record practice discourse and agency reorienting archaeological field practice the question of different expressions of human diversity and material ecologies Understanding archaeology as both a universal and highly specific discipline case studies range from the Aegean to Orkney and encompass Anatolia Korea Romania United Kingdom and the very nature of the Universe itself This critical examination of John Barrett's contribution to archaeology is simultaneously a response to his urgent call to arms to reorient archaeology in the service of humanity
