Chapter Overview

In Chapter 1 we presented a complete example of one iteration of a development project. We also introduced the six core processes of the SDLC. In this chapter we focus on the third core process: "Discover and understand the details of the problem and the need." (Since we are teaching SA&D by example and by hands-on, we move immediately into the analysis tasks of investigating and understanding the user's needs, e.g. the requirements. Later in Chapters 10 and 11 we return to core processes 1 and 2 to teach about project management.)

Since we will be using Ridgeline Mountain Outfitters (RMO) as a running case example throughout the book, we first present the detail background information on RMO.

Each of the six core processes has several detailed activities. These detailed activities are the activities that are done by system developers in order to execute a core process. Immediately after the description of RMO, the chapter presents the detailed activities for Core Process 3 and explains them in detail.

Another major topic in this chapter is a definition and discussion of requirements, including information gathering techniques, and how requirements are captured by building models.

The next topic is a discussion on stakeholders - who they are and how to gather information, e.g. requirements, from them.

Finally the chapter ends with instructions on how to use UML activity diagrams to document user workflows.

This chapter is an important chapter with key concepts to help the students understand the need and importance of system analysis and how to gather user requirements.
