Green energy can be described as clean types of energy which do not pollute or harm our _____.

Green energy may also be described as a _____ source of energy which means this type will not run out in the future as it naturally _____.

Examples of substances which are used to power our world, but may also be harmful to our world, are oil, _____ and natural gas. These substances are known as _____ fuels as they are formed over many years of heat and pressure being applied to layers of _____ material which includes dead _____ and animals.

Fossil fuels such as coal, oil and natural gas are rich in _____ so when the fuels burn, the carbon is released into our atmosphere causing smog and _____. Therefore, the types of energy produced by fossil fuels are not green because they are not clean and they are not renewable as they take _____ of years to form naturally.

Green energies are _____; they provide us with today's power needs without _____ the future generations.

Examples of renewable energies include solar, wave, geothermal, wind, air, hydropower and water energy. These types of energies can produce _____, as well as other power forms, without the need to burn anything, therefore, without producing harmful _____.

_____ power is a type of green energy which comes from the sun's rays. A good example of this is the use of solar _____ to heat buildings. Solar panels are placed, according to the direction of the sun, on rooftops. The panels absorb the sunlight and convert the rays to electricity which heat and power the building.
