Scientific Journals Impact Factor List 2012:

Numerical Correlation between Impact Factor and Web Ranking of Electronic Scientific Journals Using Regression Analysis Giorgos Kouropoulos, Γιώργος Κουρόπουλος, 2017-12-15 The present study attempts to examine the numerical correlation between web ranking of electronic scientific journals and impact factor of these journals using the method of regression analysis Regression analysis allows the option of investigating and predicting the numerical relationship between website ranking of scientific journals on the World Wide Web and the value of impact factor of the journals A sample of 57 publishers with 6 272 scientific journals and 50 standalone scientific journals was analyzed during research procedure In this study two different indicators about websites classification on World Wide Web were examined separately for 57 publishers and 50 standalone journals Alexa rank and Statscrops rank The electronic databases through the internet constitute the main information resources of this study about the impact factors The general conclusion that arises is that the impact factor of electronic scientific journals illustrates a very strong positive correlation with classification of websites on the World Wide Web Furthermore it is concluded that the change of web ranking as a function of impact factor is governed by a Gaussian function or rational function with lower Pearson coefficient and presents non linearly correlation Even if there is very strong correlation between impact factor and web rank for electronic journals the prediction of impact factor from web rank is not possible and presents many divergences

The Policies and Politics of Interdisciplinary Research Séverine Louvel,2020-11-29 Interdisciplinary research centers are blooming in almost every university and interdisciplinary research is expected to be a cure all for the ills of academic science Do disciplines still matter To what extent are interdisciplinary problem solving approaches driven by socioeconomic stakeholders and policymakers rather than by academics And how is interdisciplinarity organized Through an in depth sociological study of the development of nanomedicine in France and in the United States an area that combines nanotechnology and biomedical research this book challenges two conventional views of interdisciplinary research and academic disciplines First disciplines do not merely form separate siloes which hinder the development of interdisciplinary research rather they are flexible entities whose evolution supports the long term institutionalization of interdisciplinary science in French and US academia Secondly interdisciplinary research has no intrinsic virtue its ability to respond to societal issues and advance knowledge depends on continued political support and long term cooperation between stakeholders Interdisciplinarity might also be threatened by oversold promises and struggles for recognition A study of the many challenges facing the formation of creative and sustainable interdisciplinary scientific communities The Policies and Politics of Interdisciplinary Research tackles vivid debates among academics and research managers and will appeal to scholars of sociology science and technology studies and science policy
