Metaphor Studies: Theories, Methods, Approaches, and Future Perspectives Ilaria Rizzato, Valentina Cuccio,Aletta Gesina Dorst,2024-12-12 Metaphor has been studied as a linguistic conceptual and communicative phenomenon in a wide range of disciplines including linguistics literary studies philosophy education political science media studies communication science psychology and neurosciences While the Cognitive Theory of Metaphor has dominated the field since the cognitive turn in the 1980s alternatives have been proposed including the Neural Theory of Metaphor the Relevance Theory Approach the Complex Systems Approach and the Dynamic Systems Approach Though studies are still often text based there is a growing body of research on visual metaphor multimodal metaphor and gestural metaphor as well as experimental research ranging from studies on metaphor processing and comprehension to studies in NLP and machine learning Metaphor Studies is thus a highly interdisciplinary field that encompasses a myriad of theories approaches and methods In current metaphor research each of these strands is facing new challenges and offering new venues of cutting edge research using state of the art technologies Researchers tend to focus on their own research areas and provide in depth views within the scope of their own disciplines Metaphor Studies do not seem to escape this phenomenon in spite of the large number of disciplines they draw on ranging from linguistics to psychology to the theory of science Hence there seem to be little cooperation and communication across different fields methods and approaches having metaphors and figurative language as their main object of investigation This Research Topic aims to promote cross fertilization among the many research areas involved in Metaphor Studies thus bringing together different methods and perspectives and offering a comprehensive overview of the possible research scenarios Exploring Evidence-based

Practice Martin Lipscomb,2015-07-30 Despite sustained debate and progress the evolving thing that is evidence based nursing or practice EBP continues to dangle a variety of conceptual and practical loose threads Moreover when we think about what is being asked of students and registered or licenced practitioners in terms of EBP it is difficult not to concede that this ask is in many instances quite large and occasionally it may be unachievable EBP has and continues to improve patient client and user care Yet significant questions concerning its most basic elements remain unresolved and if nurses are to contribute to the resolution or reconfiguration of these questions then as a first step we must acknowledge their existence From a range of international standpoints and perspectives contributors to this book focus on aspects of EBP that require development This focus is always robust and at times it is unashamedly provocative Contributors challenge readers to engage with anomalies that surround the subject and readers are asked to consider the often precarious assumptions that underpin key aspects of EBP While both conflict and concord are evident among the various offerings presented here the book nonetheless creates and sustains a narrative that is bigger or more substantial than the sum of individual parts And across contributions a self assuredly critical stance towards EBP as currently practiced conceptualized and taught coexists alongside respectful admiration for all who make it happen Exploring Evidence based Practice Debates and Challenges in Nursing should be considered essential reading for academics and postgraduate students with an interest in evidence based practice and nursing research

Catalog of Copyright Entries. Third Series Library of Congress. Copyright Office,1976 **Principles of Parallel Scientific Computing** Tobias Weinzierl,2022-02-09 New insight in many scientific and engineering fields is unthinkable without the use of numerical simulations running efficiently on modern computers The faster we get new results the bigger and accurate are the problems that we can solve It is the combination of mathematical ideas plus efficient programming that drives the progress in many disciplines Future champions in the area thus will have to be qualified in their application domain they will need a profound understanding of some mathematical ideas and they need the skills to deliver fast code The present textbook targets students which have programming skills already and do not shy away from mathematics though they might be educated in computer science or an application domain It introduces the basic concepts and ideas behind applied mathematics and parallel programming that we need to write numerical simulations for today s multicore workstations Our intention is not to dive into one particular application domain or to introduce a new programming language

we lay the generic foundations for future courses and projects in the area The text is written in an accessible style which is easy to digest for students without years and years of mathematics education It values clarity and intuition over formalism and uses a simple N body simulation setup to illustrate basic ideas that are of relevance in various different subdomains of scientific computing Its primary goal is to make theoretical and paradigmatic ideas accessible to undergraduate students and to bring the fascination of the field across

Astronomy Communication Andre Heck,C. Madsen,2013-03-14

Astronomyhasalwaysbeenoneoftheeasiestofthesciencestoconveyto the public That is partly because it produces spectacular pictures that can be explained at least in part and admired partly because understanding of astronomy usually does not depend upon a knowledge of a complex classification system or esoteric terminology and partly because its extremes in distances and times challenge our imagination and philosophies Most scientists enjoy sharing with others the discoveries made by themselves and their colleagues The primary purpose of scientific research is to discover to learn and to understand When we succeed we enjoy sharing that understanding Education is most pleasurable when our audience wishes to learn and we have something important to convey A scientist that does not communicate effectively with the public soon loses its interest and support Author Andre Heck explains the many different ways in which professional communication now occurs while Leslie Sage explains how such communication should be done Astronomy done with spacecraft and large equipment is very expensive and the funds for those ultimately come from the public The cost of astronomy prorated over the number of research astronomers is perhaps the highest in all the sciences If astronomers do not share their results with the public they will lose its support However for most astronomers the desire to share and educate dominates over the pragmatic need to win public support With the advent of new communication techniques television videos CDs DVDs animation simulations we have new methods to communicate in addition to the conventional ones of the printed and spoken word Railway Age ,1919
