

When working with a load, do not lower the main boom to full retraction since the overload protection system does not function in that boom configuration.

If loading operations have to be interrupted, lay the booms down, turn the hydraulic pump off and ensure unauthorized persons cannot operate.

In order to resume work safely after a break, you must check whether anybody has manipulated the crane in the meantime.

4.1-3 Observe load limits

Never exceed the load moment permitted for the crane. This may cause uncontrolled swinging of the load or breaking (crack) of elements.

The permissible load capacities and the maximum load are given on the load capacity label.

By working with an overhang as low as possible you increase the safety and life of your crane.

Lowering a heavy load from an extended boom configuration must be performed without increasing the outreach, otherwise the admissible load limit may be exceeded. For cranes with no overload protection or fitted with an overload indicator only, this causes the booms to lower uncontrollably. For cranes with an overload protection, the resulting sudden stop puts unnecessary stress on the crane and may cause the load to slip out. For a description of safety devices see Chapter 4.2.

Load lifting material (hook, lifting slings, chains, etc.) and attachments such as grapples, rotators and thermal extensions must be accounted for when calculating the overall load.

Never exceed the load limit indicated on accessories or lifting material. Pay attention to and observe the load charts of the manufacturer when using slings, ropes, chains or any other lifting material.

Load capacity label for a crane

1. Angle specification for dead main boom position
2. Range of coverage specification
3. Load capacity return

Using safety devices can avoid accidents. They are for your protection therefore you should make sure which of the below safety devices are available on your crane.

4.2-1 Emergency off button

The emergency CUT OFF button is a safety device which, when pressed, brings the crane to an immediate stop. All crane functions remain locked until the CUT OFF button is deactivated.

On the permission controls of the remote control system, see also Chapter 4.3 Remote Control.

If an unexpected hazardous situation occurs during crane operation, release all of the operating levers immediately and press the emergency off switch until it clicks. All of the crane functions will then be blocked. If the emergency off switch was pressed because of an emergency situation, it must not be released until safe crane operation has been guaranteed.

If, during operation, the CUT OFF valve is activated because of a power supply failure, you can bring the crane back into transport position with the following procedure:

- Depress of the load limit and the spacer on the valve.
- Turn in the locked thumb screw.

After this procedure, the CUT OFF button is out of order and must be repaired as soon as possible at your service workshop.
