The End of Fire: Hydrino Energy and the Future of Physics Brett Holverstott, 2025-03-26 When Randell Mills predicted hydrino states of hydrogen and the powerful chemical reaction to produce them it was a quantum leap from a new discovery in physics to a new energy source for mankind Despite skepticism from the scientific community Mills went on to lead a team of scientists and engineers in a decades long effort to show that hydrino was real could be found in nature and could be made in the laboratory The result was the engineering of a new power source the SunCell that uses water as fuel and could bring an end to the era of fossil fuels Meanwhile the science behind the hydrino sheds light on numerous mysteries from the scale of the atom to that of the cosmos

Altschuler, Isaac Kramnick, 2014-08-12 In their history of Cornell since 1940 Glenn C Altschuler and Isaac Kramnick examine the institution in the context of the emergence of the modern research university The book examines Cornell during the Cold War the civil rights movement Vietnam antiapartheid protests the ups and downs of varsity athletics the women s movement the opening of relations with China and the creation of Cornell NYC Tech It relates profound fascinating and little known incidents involving the faculty administration and student life connecting them to the Cornell idea of freedom and responsibility The authors had access to all existing papers of the presidents of Cornell which deeply informs their respectful but unvarnished portrait of the university Institutions like individuals develop narratives about themselves Cornell constructed its sense of self of how it was special and different on the eve of World War II when America defended democracy from fascist dictatorship

Cornell's fifth president Edmund Ezra Day and Carl Becker its preeminent historian discerned what they called a Cornell soul a Cornell character a Cornell personality a Cornell tradition and they called it freedom The Cornell idea was tested and contested in Cornell's second seventy five years Cornellians used the ideals of freedom and responsibility as weapons for change and justifications for retaining the status quo to protect academic freedom and to rein in radical professors to end in loco parentis and parietal rules to preempt party raids pornography and pot parties and to reintroduce regulations to protect and promote the physical and emotional well being of students to add nanofabrication entrepreneurship and genomics to the curriculum and to require language courses freshmen writing and physical education In the name of freedom and responsibility black students occupied Willard Straight Hall the anti Vietnam War SDS took over the Engineering Library proponents of divestment from South Africa built campus shantytowns and Latinos seized Day Hall In the name of responsibility and freedom the university reclaimed them The history of Cornell since World War II Altschuler and Kramnick believe is in large part a set of variations on the narrative of freedom and its partner responsibility the obligation to others and to one's self to do what is right and useful with a principled commitment to the Cornell community and to the world outside the Eddy Street gate

The Cloud Revolution Mark P. Mills, 2021-11-02 The conventional wisdom on how technology will change the future is wrong Mark Mills lays out a radically different and optimistic vision for what's really coming The mainstream forecasts fall into three camps One considers today as the new normal where ordering a ride or food on a smartphone or trading in bitcoins is as good as it's going to get Another foresees a dystopian era of widespread digitally driven job and business destruction A third believes that the only technological revolution that matters will be found with renewable energy and electric cars But according to Mills a convergence of technologies will instead drive an economic boom over the coming decade one that historians will characterize as the Roaring 2020s It will come not from any single big invention but from the confluence of radical advances in three primary technology domains microprocessors materials and machines Microprocessors are increasingly embedded in everything Materials from which everything is built are emerging with novel almost magical capabilities And machines which make and move all manner of stuff are undergoing a complementary transformation Accelerating and enabling all of this is the Cloud history's biggest infrastructure which is itself based on the building blocks of next generation microprocessors and artificial intelligence We've seen this pattern before The technological revolution that drove the great economic expansion of the twentieth century can be traced to a similar

confluence one that was first visible in the 1920s a new information infrastructure telephony new machines cars and power plants and new materials plastics and pharmaceuticals Single inventions don't drive great long cycle booms It always takes convergent revolutions in technology's three core spheres information materials and machines Over history that's only happened a few times We have wrung much magic from the technologies that fueled the last long boom But the great convergence now underway will ignite the 2020s And this time unlike any previous historical epoch we have the Cloud amplifying everything The next long boom starts now
