The Error of Truth Steven J. Osterlind,2019-01-24 Quantitative thinking is our inclination to view natural and everyday phenomena through a lens of measurable events with forecasts odds predictions and likelihood playing a dominant part The Error of Truth recounts the astonishing and unexpected tale of how quantitative thinking came to be and its rise to primacy in the nineteenth and early twentieth centuries Additionally it considers how seeing the world through a quantitative lens has shaped our perception of the world we live in and explores the lives of the individuals behind its early establishment This worldview was unlike anything humankind had before and it came about because of a momentous human achievement we had learned how to measure uncertainty Probability as a science was conceptualised As a result of

probability theory we now had correlations reliable predictions regressions the bellshaped curve for studying social phenomena and the psychometrics of educational testing Significantly these developments happened during a relatively short period in world history roughly the 130 year period from 1790 to 1920 from about the close of the Napoleonic era through the Enlightenment and the Industrial Revolutions to the end of World War I At which time transportation had advanced rapidly due to the invention of the steam engine and literacy rates had increased exponentially This brief period in time was ready for fresh intellectual activity and it gave a kind of impetus for the probability inventions Quantification is now everywhere in our daily lives such as in the ubiquitous microchip in smartphones cars and appliances in the Bayesian logic of artificial intelligence as well as applications in business engineering medicine economics and elsewhere Probability is the foundation of quantitative thinking The Error of Truth tells its story when why and how it happened *Chemical Control* Michael Crowley,2016-01-26 This thoroughly researched study highlights the international community's failure to regulate contemporary state research development marketing and or deployment of riot control agents and incapacitating chemical agent weapons **October 2019 Monthly Current Affairs with MCQs for Competitive Exams** Disha Experts,2019-09-25 *Data for the People* Andreas Weigend,2017-01-31 A long time chief data scientist at Amazon shows how open data can make everyone not just corporations richer Every time we Google something Facebook someone Uber somewhere or even just turn on a light we create data that businesses collect and use to make decisions about us In many ways this has improved our lives yet we as individuals do not benefit from this wealth of data as much as we could Moreover whether it is a bank evaluating our credit worthiness an insurance company determining our risk level or a potential employer deciding whether we get a job it is likely that this data will be used against us rather than for us In *Data for the People* Andreas Weigend draws on his years as a consultant for commerce education healthcare travel and finance companies to outline how Big Data can work better for all of us As of today how much we benefit from Big Data depends on how closely the interests of big companies align with our own Too often outdated standards of control and privacy force us into unfair contracts with data companies but it doesn't have to be this way Weigend makes a powerful argument that we need to take control of how our data is used to actually make it work for us Only then can we the people get back more from Big Data than we give it Big Data is here to stay Now is the time to find out how we can be empowered by it **Christian Ethics** Wayne Grudem,2018-07-20 What does the Bible teach about how to live in today's world Best selling author and professor Wayne Grudem distills over forty years of teaching experience into a single volume aimed at helping readers apply a biblical worldview to difficult ethical issues including wealth and poverty marriage and divorce birth control abortion euthanasia homosexuality business practices environmental stewardship telling the truth knowing God's will understanding Old Testament laws and more *Superguns 1854-1991* Steven J. Zaloga,2018-12-27 Over the last 150 years gun designers have sought to transform warfare with artillery of superlative range and power from William Armstrong's 19th century

monster guns to the latest research into hypersonic electro magnetic railguns Taking a case study approach Superguns explains the technology and role of the finest monster weapons of each era It looks at the 1918 Wilhelm Gun designed to shell Paris from behind the German trenches the World War II V 3 gun built to bombard London across the Channel the Cold War atomic cannons of the US and Soviet Union and the story of Dr Gerald Bull s HARP program and the Iraqi Supergun he designed for Saddam Hussein Illustrated throughout this is an authoritative history of the greatest and most ambitious artillery pieces of all time
