***Institutional Review Board (IRB) and Ethical Conduct in Research.**

This section also provides important information used for preparing the Institutional Review Board (IRB) approval request. As you know by now the IRB must approve your research prior to interacting with human subjects or collecting data from human subjects. It is recommended that studies that do not intend to interact with human subjects apply and receive approval from the IRB to prevent unintended harm to others and the loss of the resulting research data. *Please be certain to use the BGS specific IRB forms and procedures.*

All research regardless of whether or not it interacts with humans must apply to and be approved by the IRB. All research involving human interaction must include a signed informed consent form. Subjects under the age of eighteen and others who are not able to sign for themselves are not included in BGS student research. You will need to keep the consent forms and information confidential and separate from the data. Confidentiality means that you may not reveal who participated in your research, unless otherwise directed by an agent of the university, which should come through the IRB, the Dean's Office, or your instructor. Your instructor or the IRB can ask to review your consent documentation to verify the authenticity of your participants.

A common pitfall for students is that they test their data collection instruments with likely subjects or begin to collect data *PRIOR* to receiving approval to their research by the IRB. These students must destroy this data and it cannot be used in the research study. Violation of this policy might lead to an *academic dishonesty hearing* and the potential for being *dismissed from the university*.
