 born through both the informal and formal education process In the author s current role as professor of science education
 Dr Goetz has surveyed hundreds of female elementary education majors in their junior and senior year of college The results
 of her study show that the majority of the future teachers do not feel confident teaching science at the elementary level feel
 ill prepared to teach science in general and have had negative experiences during their elementary middle and high school
 years in science classes Dr Goetz raises the question of whether or not there is a cycle of poor science instruction during the
 early years delivered by poorly prepared teachers who themselves had poor instruction from poorly prepared teachers In
 order to break this cycle it is necessary to better prepare our future female teachers who will then model excitement
 enthusiasm and expertise in science instruction Perhaps then we ll begin to see our girls show increased interest and
 achievement in the sciences While the focus of Science for Girls is on science education information about current research
 in the area of female learning styles in general is also presented Furthermore the author is careful to point out that the
 strategies suggested will not only benefit female students but also their male counterparts Containing current research
 lesson plans and learning strategies and resources in science education this book will be of benefit for classroom teachers
 parents and most importantly the students they are teaching Math 76 Stephen Hake,John H. Saxon,Hake,1992 *Films*
