Republican Europe Anna Kocharov, 2017-06-01 Constitutional orders constitute political communities and international orders deriving from them by managing conflicts that threaten peace This book explores how a European political community can be advanced through EU constitutional law The constitutional role of the Union is to ensure peace by addressing two types of conflict The first are static conflicts of interests between the national polities in the EU These are avoided by ensuring reciprocal non interference between Member States in the Union through deregulation in Union law The second are dynamic conflicts of ideas about positive liberty held by the peoples of Europe These can be resolved through regulation in a European political space Here EU law enables a continuous process of re negotiating a shared European idea of positive liberty that can be accepted as its own by each national polity in the EU These solutions to the two types of conflicts correspond to the liberal and republican

models for Europe The claim of this book is that the constitutional design of Europe presents both liberal and republican features Taking an innovative approach which draws on arguments from substantive law constitutional theory case law analysis insights from psychology and philosophy it identifies how best to strengthen the Union through constitutional law

Place in Place Attachment Alexander C. Diener, Joshua Hagen, 2023-02-28 This book provides geographical perspectives on the complex and multifaceted relationship between people and their lived environments. Scholars with varied regional theoretical and topical specialties offer chapters that explore different aspects of a phenomenon so pervasive that no conception of social or political action can afford to ignore it. In the process of spatial organization and differentiation, people develop emotional attachments to specific places as well as people, objects and practices associated with those places. Place attachments thereby shape everyday routines, e.g. routes to work, shopping, social interactions, major life choices, e.g. places of residence, education and vacations, and identities, e.g. civic, national and religious. These attachments occur across multiple scales, from personal dwellings to community, region and homeland. It is our hope that this book reveals synergies between geography and other disciplines engaging with place attachment, whilst invigorating research on the topic. *The Power of Place in Place Attachment* will be of great value to researchers and scholars of geography, identity, mobility and urban landscape change. The chapters in this book were originally published as a special issue of *Geographical Review*. *Framing Community Disaster Resilience* Hugh Deeming, Maureen Fordham, Christian Kuhlicke, Lydia Pedoth, Stefan Schneiderbauer, Cheney Shreve, 2019-01-29 An essential guide to the foundations, research and practices of community disaster resilience. *Framing Community Disaster Resilience* offers a guide to the theories, research and approaches for addressing the complexity of community resilience towards hazardous events or disasters. The text draws on the activities and achievements of the project *emBRACE: Building Resilience Amongst Communities in Europe*. The authors identify the key dimensions of resilience across a range of disciplines and domains and present an analysis of community characteristics, networks, behaviour and practices in specific test cases. The text contains an in-depth exploration of five test cases whose communities are facing impacts triggered by different hazards: namely river floods in Germany, earthquakes in Turkey, landslides in South Tyrol, Italy, heat waves in London and combined fluvial and pluvial floods in Northumberland and Cumbria. The authors examine the data and indicators of past events in order to assess current situations and to tackle the dynamics of community resilience. In addition, they put the focus on empirical analysis to explore the resilience concept and to test the usage of indicators for describing community resilience. This important text merges the forces of research, knowledge, networking and practices in order to understand community disaster resilience. Contains the results of the acclaimed project *Building Resilience Amongst Communities in Europe*. *emBRACE* explores the key dimensions of community resilience. Includes five illustrative case studies from European communities that face various hazards. Written for undergraduate students, postgraduates and researchers of social science and policymakers. *Framing Community Disaster Resilience* reports on the findings of an important study to reveal the most effective approaches to enhancing community resilience. The *emBRACE* research received funding from the European Community's Seventh Framework Programme (FP7) 2007-2013 under grant agreement n° 283201. The European Community is not liable for any use that may be made of the information contained

Additive Manufacturing -3D Printing & Design Dr. Sabrie Soloman, Additive Manufacturing 3D Printing rendering to the United States Census Bureau manufacturers are the nation s fourth largest employer and ship several trillions of dollars in goods per annum It may be a large automotive enterprise manufacturing vehicles or an institution with less than 50 employees Manufacturers are vital to the country s global success However many societies have misunderstandings about the manufacturing jobs are undesirable jobs and offers low paying compensations Other countries may be discouraged to compete against USA Additive Manufacturing Technology 3D Printing would level the manufacturing plane field enabling all countries to globally stand on equal footing Dr Sabrie Soloman Chairman CEO 3D Printing Design Not ever previously consumer has had a technology where we so easily interpret the concepts into a touchable object with little concern to the machinery or talents available 3D

Printing Technology builds up parts by adding materials one layer at a time based on a computerized 3D solid model. It allows design optimization and the producing of customized parts on demand. Its advantages over conventional manufacturing have captivated the imagination of the public reflected in recent corporate implementations and in many academic publications that call additive manufacturing the Fourth Industrial Revolution. 3D Printing produces 3D solid items from a digital computer file. The printing occurs in an additive process where a solid object is generated through the consecutive layering of material. The process begins with the generation of a 3D digital file such as CAD file. The 3D digital file is then directed to a 3D Printer for printing using a simple print command. Freed of the constraints of traditional factories, additive manufacturing allows designers to produce parts that were previously considered far too complex to make economically. Engineers and Biologists are finding practical applications to use 3D additive manufacturing. It permits novel designs to become matchless rare products that were not likely with preceding manufacturing methods. 3D Printing Technology is poised to transform medicine and biology with bio manufacturing and traditional manufacturing into 3D Printing. This technology has the possibility to upsurge the well being of a nation's citizens. Additive manufacturing may progress the worldwide resources and energy effectiveness in Ground, Sea and Air. This 3D Printing Design book will enable you to develop and 3D Print your own unique object using myriads of available worldwide materials. One off prototypes can be hideously expensive to produce but a 3D Printer can bring down the cost by a sizable margin. Many consumer goods, mechanical parts, aerospace, automobiles, robots, shoes, fashions, architects' models, dentures, hearing aids, cell biology now appear in a 3D printed form for appraisal by engineers, stylists, biologist and clients before obtaining the final approval. The 3D Printing Technology provides the additional advantage of removing many overhead manufacturing costs and time delay. The rewards are substantial as it permits product development teams effortlessly, rapidly and cost effectively yielding models, prototypes and patterns to be manufactured in hours or days rather than weeks or months.
