Geospatial Data in a Changing World Tapani Sarjakoski, Maribel Yasmina Santos, L. Tiina Sarjakoski, 2016-05-14 This book collects innovative research presented at the 19th Conference of the Association of Geographic Information Laboratories in Europe AGILE on Geographic Information Science held in Helsinki Finland in 2016

Basic Principles of Topography Blagoja Markoski, 2018-01-18 This book gives a comprehensive overview of all relevant elements in topography and their practical application. It elaborates on the classical representation of terrain on maps such as cartographic projections together with their classification scale and geographical elements. It is richly illustrated with photographs, maps and figures in which the theoretical explanations are clarified. Readers will become acquainted with the physical characteristics of the ground, i.e. tectonic and erosive shapes, the importance and classification of terrain, genetic fluvial, abrasive, glacial, karst and topographic types such as higher mountains, hills, peaks and lower terrain, valleys, fields. In addition, the book discusses cartometry and coordinate systems, orientation in space, geographic topographic tactics including by means of maps, instruments and the night sky and elaborates new techniques and technologies such as aerial photogrammetric imagery, global navigation satellite systems and LiDAR. The book also includes methods for the practical execution of concrete measurement operations such as determining position and movement on land with maps, compass and azimuth, which makes it especially useful for practitioners and professionals, e.g. for landscape planning, military exercises, mountaineering, nature walks, etc. As such, it offers a valuable guide not only for undergraduate students but also for researchers in the fields of geography, geosciences, geodesy, ecology, forestry and related areas looking for an overview on topography. Uniquely, the book also features an extensive glossary of topographical terms.

Autocar, 2004 *Introduction to Modern Design* George H. Marcus, 2019-12-26 With some 280 colour illustrations, *Introduction to Modern Design* takes us on a visual survey of design from the Industrial Revolution of the eighteenth century to the Maker Movement of today. It offers a new understanding of the birth of modern design in the early twentieth century and chronicles the way its meaning has changed over the decades. The narrative is supported by twenty-six readings from significant texts by designers and critics, offering readers an opportunity to learn about design from those who created it and those who commented on it as it was done. The focus of this book is on the objects themselves: from industrial design, furniture, ceramics, textiles, graphics, electronics to automobiles, and explores the development of these designs in relation to industrialization, technology, environmental responsibility, consumerism, individual needs and the expression of the social values of their day. Clearly written and accessible, *Introduction to Modern Design* provides a succinct history of and fascinating insights into the world of design.
