Pedagogical Cases in Physical Education and Youth Sport Kathleen Armour, 2014-01-21 *Pedagogical Cases in Physical Education and Youth Sport* is a completely new kind of resource for students and practitioners working in physical education or youth sport. The book consists of 20 richly described cases of individual young learners each written by a team of authors with diverse expertise from across the sport exercise and movement sciences. These cases bring together knowledge from single sub disciplines into new interdisciplinary knowledge to inform best practice in physical education teaching and coaching in youth sport settings. At the heart of each case is an individual young person of a specified age and gender with a range of physical social and psychological characteristics. Drawing on current research theory and empirical data from their own specialist discipline each chapter author identifies the key factors they feel should be taken into account when attempting to teach or coach the young person described. These strands are then drawn together at the end of each chapter and linked to current research from the sport pedagogy literature to highlight the implications for planning and evaluating teaching or coaching sessions. No other book offers such a rich vivid and thought provoking set of pedagogical tools for understanding and working with children and young people in sport. This is an essential resource for any student on a physical education coaching kinesiology or sport science course and for any teacher coach or instructor working in physical education or youth sport.

A Lever Long Enough Robert McCaughey, 2014-06-03 In this comprehensive social history of Columbia University's School of Engineering and Applied Science SEAS Robert McCaughey combines archival research with oral testimony and contemporary interviews to build a critical and celebratory portrait of one of the oldest engineering schools in the United States. McCaughey follows the evolving occasionally rocky and now integrated relationship between SEAS's engineers and the rest of the Columbia University student body faculty and administration. He also revisits the interaction between the SEAS staff and the inhabitants and institutions of the City of New

York where the school has resided since its founding in 1864 McCaughey compares the historical struggles and achievements of the school's engineers with their present day battles and accomplishments and he contrasts their teaching and research approaches with those of their peers at other free standing and Ivy League engineering schools What begins as a localized history of a school striving to define itself within a university known for its strengths in the humanities and the social sciences becomes a wider story of the transformation of the applied sciences into a critical component of American technology and education

Oscar Koopman, 2016-11-01 This book explores the impact of the socio historical political and economic environment in South Africa both during and after Apartheid During this time the South African education system demonstrated an interest in a specific type of knowledge which Koopman refers to as a science of government This science of government leaves the learners with a blurred understanding of science that is disconnected from external nature and human nature and is presented as a series of abstract concepts and definitions The book also investigates the dialectical tensions between the science curriculum and the role of the teacher as an active implementer of the curriculum The book draws on the work of various phenomenological scholars namely Edmund Husserl Martin Heidegger Merleau Ponty and Max van Manen to discuss these tensions Spectral Approach to Transport Problems in Two-Dimensional Disordered Lattices Evdokiya Georgieva

Kostadinova, 2018-12-11 This book introduces the spectral approach to transport problems in infinite disordered systems characterized by Anderson type Hamiltonians The spectral approach determines with probability one the existence of extended states for nonzero disorder in infinite lattices of any dimension and geometry Here the author focuses on the critical 2D case where previous numerical and experimental results have shown disagreement with theory Not being based on scaling theory the proposed method avoids issues related to boundary conditions and provides an alternative approach to transport problems where interaction with various types of disorder is considered Beginning with a general overview of Anderson type transport problems and their relevance to physical systems it goes on to discuss in more detail the most relevant theoretical numerical and experimental developments in this field of research The mathematical formulation of the innovative spectral approach is introduced together with a physical interpretation and discussion of its applicability to physical systems followed by a numerical study of delocalization in the 2D disordered honeycomb triangular and square lattices Transport in the 2D honeycomb lattice with substitutional disorder is investigated employing a spectral analysis of the quantum percolation problem Next the applicability of the method is extended to the classical regime with an examination of diffusion of lattice waves in 2D disordered complex plasma crystals along with discussion of proposed future developments in the study of complex transport problems using spectral theory *Working-Class Schooling in*
