Polymerase Chain Reaction

Synopsis

In this Polymerase Chain Reaction (PCR) simulation, you will see through eight steps another method, known as restriction fragment length polymorphism (RFLP) analysis, for identifying the crime scene DNA sample. First, you will see the subject crime scene evidence in the form of the DNA sample that left traces at the crime scene.

Design the test

After sampling, you will go to the restriction endonuclease step, where you will select the enzyme to restrict a fragment of DNA sample. Then you will identify the fragment sizes. It is up to you to make the correct restriction enzyme choice for the PCR experiment.

See the structure of the sample restriction enzyme

In the simulation, you will see the DNA sequence at the restriction site, illustrating the structure of the DNA and the restriction site. You will also see the restriction enzyme structure. As well as an illustration of the restriction site.

Identify the restriction

In the PCR simulation, you will select your sample and other restriction enzymes from the restriction site and select their restriction site. You will also see the restriction site structure.

Learning Objectives

In this PCR simulation, you will see the restriction

1. Restriction site sequence of the PCR sample and the restriction site sequence.
2. Restriction site sequence of the PCR sample and the restriction site sequence.
