People and Computers XIV — Usability or Else! Sharon McDonald, Yvonne Waern, Gilbert Cockton, 2012-12-06 Currently we are at the beginnings of widespread wireless connectivity and ubiquitous computing The Web is merging with a variety of technologies cell phones laptop computers hand held organisers information appliances and GPS and other sensors The capability for access anytime and anywhere is here The increasing frequency of cell phone calls at inappropriate times testifies that people no longer can easily control access Devices can determine where they are located and can make a range of information available to users as well as make users available to others or their devices We have proposed a general technique that promises to assist in mediating access It capitalises on advantages afforded by computation Hollan Stometta 1992 We first described the negotiation technique in the context of problems involved in scheduling meetings and then showed that similar issues which at first may seem unrelated but in fact have much in common arise in other contexts One such activity gaining immediate access is currently of growing importance because of expanding connectivity via wireless technology Cell phones and related technologies make it possible to be constantly available for synchronous interaction At times this can be advantageous but the associated costs and benefits result in a complex tradeoff space for designers as well as users

Domain-Specific Modeling Steven Kelly, Juha-Pekka Tolvanen, 2008-02-13 The authors are pioneers Few in our industry have their breadth of knowledge and experience From the Foreword by Dave Thomas Bedarra Labs Domain Specific Modeling DSM is the latest approach to software development promising to greatly increase the speed and ease of software creation Early adopters of DSM have been enjoying productivity increases of 500 1000% in production for over a decade This book introduces DSM and offers examples from various fields to illustrate to experienced developers how DSM can improve software development in their teams Two authorities in the field explain what DSM is why it works and how to successfully create and use a DSM solution to improve productivity and quality

Divided into four parts the book covers background and motivation fundamentals in depth examples and creating DSM solutions There is an emphasis throughout the book on practical guidelines for implementing DSM including how to identify the necessary language constructs how to generate full code from models and how to provide tool support for a new DSM language The example cases described in the book are available the book s Website www.dsmbook.com along with an evaluation copy of the MetaEdit tool for Windows Mac OS X and Linux which allows readers to examine and try out the modeling languages and code generators Domain Specific Modeling is an essential reference for lead developers software engineers architects methodologists and technical managers who want to learn how to create a DSM solution and successfully put it into practice

Ubiquitous Mobile Information and Collaboration Systems Luciano

Baresi,Schahram Dustdar,Harald Gall,Maristella Matera,2005-03-01 Over recent years most business processes have changed in various dimensions e g exhibility interconnectivity coordination style autonomy due to market conditions organizational models and usage scenarios of information systems Frequently information is relocated within a geographically distributed system according to rules that are only seldom defined as a well coded business process This creates the need for a software infrastructure that enables ubiquitous mobile and collaboration systems UMICS The anywhere anytime any means paradigm is becoming the major challenge in conceiving designing and releasing next generation information systems New technologies like wi networks and 3rd generation mobile phones are offering the infrastructure to conceive of information systems as ubiquitous information systems that is systems that are accessible from anywhere at any time and with any device Ubiquity is not yet another buzzword pushed by emerging technologies but is mainly a means to support new business models and encourage new ways of working This new wave of UMICS will exploit the knowledge developed and deployed for conventional information systems but will also need new concepts models methodologies and supporting technologies to fully exploit the potentials of the enabling infrastructure and to be ready for the challenge Moreover people need to move across organizational boundaries and collaborate with others within an organization as well as between organizations The ability to query the company s distributed knowledge base and to cooperate with co workers is still a requirement but mobility brings new access scenarios and higher complexity
