Longhini,2013-12-13 A collection of different lectures presented by experts in the field of nonlinear science provides the reader with contemporary cutting edge research works that bridge the gap between theory and device realizations of nonlinear phenomena Representative examples of topics covered include chaos gates social networks communication sensors lasers molecular motors biomedical anomalies stochastic resonance nano oscillators for generating microwave signals and related complex systems A common theme among these and many other related lectures is to model study understand and exploit the rich behavior exhibited by nonlinear systems to design and fabricate novel technologies with superior characteristics Consider for instance the fact that a shark s sensitivity to electric fields is 400 times more powerful than the most sophisticated electric field sensor In spite of significant advances in material properties in many cases it remains a daunting task to duplicate the superior signal processing capabilities of most animals Since nonlinear systems tend to be highly sensitive to perturbations when they occur near the onset of a bifurcation there are also lectures on the general topic of bifurcation theory and on how to exploit such bifurcations for signal enhancements purposes This manuscript will appeal

to researchers interested in both theory and implementations of nonlinear systems      *Artificial Intelligence and Brain Research* Patrick Krauss, 2024-07-12 How does artificial intelligence AI work and are there parallels to the human brain What do natural and artificial intelligence have in common and what are the differences Is the brain nothing more than a biological computer What are neural networks and how can the term deep learning be explained simply Since the cognitive revolution in the middle of the last century AI and brain research have been closely intertwined There have been several spectacular breakthroughs in the field of AI in recent years from alphaGo to DALL E 2 and ChatGPT which were completely unthinkable until recently However researchers are already working on the innovations of tomorrow such as hybrid machine learning or neuro symbolic AI But what does this actually mean Based on current research findings and exciting practical examples this non fiction book provides an understandable introduction to the basics and challenges of these fascinating disciplines You will learn what neuroscience and psychology know about how the brain works and how artificial intelligence works You will also learn how AI has revolutionized our understanding of the brain and how findings from brain research are used in computer science to further develop AI algorithms Discover the fascinating world of these two disciplines Find out why artificial intelligence and brain research are two sides of the same coin and how they will shape our future      *Nonlinear Vibration and Dynamics of Smart Continuous Structures and Materials* Majid Ghadiri, 2025-05-08 Nonlinear Vibration and Dynamics of Smart Continuous Structures and Materials delves into intricate subjects concerning the analysis of nonlinear vibration issues in continuous structures It covers general concepts and a history of nonlinear systems before evolving into kinetics and solution methods of continuous structures Exploring the implementation of new types of materials in various sectors of automobile aerospace and structural engineering the book provides applicable information on the behaviors of smart structures The book provides a set of mathematical formulations to solve nonlinear static and dynamic behaviors of smart continuous structures by applying principles of elasticity The book will interest academic researchers and graduate students studying structural engineering mechanics of solids and smart materials      *Advance Elements of Laser Circuits and Systems* Ofer Aluf, 2021-03-09 This book on Advance Elements of Laser circuits and systems Nonlinearity applications in engineering addresses two separate engineering and scientific areas and presents advanced analysis methods for Laser circuits and systems that cover a broad range of engineering and scientific applications The book analyzed Laser circuits and systems as linear and nonlinear dynamical systems and there limit cycles bifurcation and limit cycle stability by using nonlinear dynamic theory Further it discussed a broad range of bifurcations related to Laser systems and circuits starting from laser system differential equations and their bifurcations delay differential equations DDEs are a function of time delays delay dependent parameters followed by phase plane analysis limit cycles and their bifurcations chaos iterated maps period doubling It combines graphical information with analytical analysis to effectively study the local stability of Laser systems models involving delay dependent parameters Specifically the stability of a given steady state is determined by the graphs of

*An Approach to Multi-agent Systems as a Generalized Multi-synchronization Problem* Rafael Martínez-Guerra, Juan Pablo Flores-Flores, 2023-03-09 This book addresses the problem of multi agent systems considering that it can be interpreted as a generalized multi synchronization problem From manufacturing tasks through encryption and communication algorithms to high precision experiments the simultaneous cooperation between multiple systems or agents is essential to successfully carrying out different modern activities both in academy and industry For example the coordination of multiple assembler robots in manufacturing lines These agents need to synchronize The first two chapters of the book describe the synchronization of dynamical systems paying special attention to the synchronization of non identical systems Following the third chapter presents an interesting application of the synchronization phenomenon for state estimation Subsequently the authors fully address the multi agent problem interpreted as multi synchronization The final chapters introduce the reader to a more complex problem the synchronization of systems governed by partial differential equations both of integer and fractional order The book aimed at graduates postgraduate students and researchers closely related to the area of automatic control Previous knowledge of linear algebra classical and fractional calculus is requested as well as some fundamental notions of graph theory

**Neurobiology of Interval Timing** Hugo Merchant, Victor de Lafuente, 2024-06-25 The study of

how the brain processes time is becoming one of the most important topics in systems cellular computational and cognitive neuroscience as well as in the physiologic bases of music and language During the last and current decade interval timing has been intensively studied in humans and animals using increasingly sophisticated approaches This new edition of the Neurobiology of Interval Timing integrates the current knowledge of animal behavior and human cognition of the passage of time in different behavioral contexts including the perception and production of time intervals as well as rhythmic activities The chapters are written by the leading experts in the fields of psychophysics functional imaging systems neurophysiology and musicology The new edition features a complete updating of the content with many new chapters The main updates are the remarkable advances in our understanding of the neural basis of temporal processing in monkeys rodents and humans The notion is that the neural clock depends on the dynamics of neural populations in the motor system and that this general internal time representation interacts with the sensory and cognitive systems depending on the timing requirements and the behavioral contingencies of a specific task Also this edition delineates a clearer distinction between interval based and beat based timing in humans
