Can We Be Happier? Richard Layard, George Ward, 2020-01-23 From the bestselling author of Happiness and co editor of the annual World Happiness Report Most people

now realize that economic growth however desirable will not solve all our problems. Instead we need a philosophy and a science which encompasses a much fuller range of human need and experience. This book argues that the goal for a society must be the greatest possible all round happiness and shows how each of us can become more effective creators of happiness both as citizens and in our own organizations. Written with Richard Layard's characteristic clarity it provides hard evidence that increasing happiness is the right aim and that it can be achieved. Its language is simple, its evidence impressive, its effect inspiring. In this book *Can We Be Happier* which is part of Richard Layard's excellent ongoing exploration of what happiness is and how it can be achieved, he provides evidence that if you have peace of mind and are full of joy, your health will be good, your family will be happy and that happiness will affect the atmosphere of the community in which you live. The Oxford Handbook of Cultural Neuroscience Joan Y. Chiao, Shu-Chen Li (Research scientist), Rebecca Seligman, Robert Turner, 2016. This Handbook examines disparities in public health by highlighting recent theoretical and methodological advances in cultural neuroscience. It traces the interactions of cultural, biological and environmental factors that create adverse physical and mental health conditions among populations and investigates how the policies of cultural and governmental institutions influence such outcomes. In addition to providing an overview of the current research, chapters demonstrate how a cultural neuroscience approach to the study of the mind, brain and behavior can help stabilize the quality of health of societies at large. The volume will appeal especially to graduate students and professional scholars working in psychology and population genetics. The Oxford Handbook of Cultural Neuroscience represents the first collection of scholarly contributions from the International Cultural Neuroscience Consortium (ICNC), an interdisciplinary group of scholars from epidemiology, anthropology, psychology, neuroscience, genetics and psychiatry, dedicated to advancing an understanding of culture and health using theory and methods from cultural neuroscience. The Handbook is intended to introduce future generations of scholars to foundations in cultural neuroscience and to equip them to address the grand challenges in global mental health in the twenty-first century.
