The Quick Fix Jesse Singal, 2021-04-06 An investigative journalist exposes the many holes in today's bestselling behavioral science and argues that the trendy TED Talk friendly psychological interventions that are so in vogue at the moment will never be enough to truly address social injustice and inequality With their viral TED talks bestselling books and counter intuitive remedies for complicated problems psychologists and other social scientists have become the reigning thinkers of our time Grit and power posing promised to help overcome entrenched inequalities in schools and the workplace the Army spent hundreds of millions of dollars on a positive psychology intervention geared at preventing PTSD in its combat soldiers and the implicit association test swept the nation on the strength of the claim that it can reveal unconscious biases and reduce racism in police departments and human resources departments But what if much of the science underlying these blockbuster ideas is dubious or fallacious What if Americans longstanding preference for simplistic self help platitudes is exerting a pernicious influence on the way behavioral science is communicated and even funded leading respected academics and the media astray In *The Quick Fix* Jesse Singal examines the most influential ideas of recent decades and the shaky science that supports them He begins with the California legislator who introduced self esteem into classrooms around the country in the 1980s and the Princeton political scientist who warned of an epidemic of youthful superpredators in the 1990s In both cases a much touted idea had little basis in reality but had a massive impact Turning toward the explosive popularity of 21st century social psychology Singal examines the misleading appeal of entertaining lab results and critiques the idea that subtle unconscious cues shape our behavior As he shows today's popular behavioral science emphasizes repairing improving and optimizing individuals rather than truly understanding and confronting the larger structural forces that drive social ills Like Anand Giridharadas's *Winners Take All* *The Quick Fix* is a

fresh and powerful indictment of the thought leaders and influencers who cut corners as they sell the public half baked solutions to problems that deserve more serious treatment *The Trinity Is the Matrix* Gary D. Hanes, 2016-06-22 Understanding and being able to predict fluvial processes is one of the biggest challenges for hydraulics and environmental engineers hydrologists and other scientists interested in preserving and restoring the diverse functions of rivers The interactions among flow turbulence vegetation macroinvertebrates and other organisms as well as the transport and retention of particulate matter have important consequences on the ecological health of rivers Managing rivers in an ecologically friendly way is a major component of sustainable engineering design maintenance and restoration of ecological habitats To address these challenges a major focus of River Flow 2016 was to highlight the latest advances in experimental computational and theoretical approaches that can be used to deepen our understanding and capacity to predict flow and the associated fluid driven ecological processes anthropogenic influences sediment transport and morphodynamic processes River Flow 2016 was organized under the auspices of the Committee for Fluvial Hydraulics of the International Association for Hydro Environment Engineering and Research IAHR Since its first edition in 2002 the River Flow conference series has become the main international event focusing on river hydrodynamics sediment transport river engineering and restoration Some of the highlights of the 8th International Conference on Fluvial Hydraulics were to focus on inter disciplinary research involving among others ecological and biological aspects relevant to river flows and processes and to emphasize broader themes dealing with river sustainability River Flow 2016 extended abstract book 854 pages full paper CD ROM 2436 pages contains the contributions presented during the regular sessions covering the main conference themes and the special sessions focusing on specific hot topics of river flow research and will be of interest to academics interested in hydraulics hydrology and environmental engineering *Neuroinflammation and Behaviour* Luba Sominsky, Adam K. Walker, Deborah M. Hodgson, 2015-07-21 The brain and immune system are involved in an intricate network of bidirectional communication

This relationship is vital for optimal physiological and psychological development and functioning but can also result in unwanted outcomes. In particular, this interaction plays an important role in cognition, mood, and behaviour. Neuroinflammation is known to contribute to neurological and affective disorders, including impaired learning and memory, depressive anxiety, and schizoaffective symptoms, as well as pain. The development of these conditions often occurs on the backdrop of pre-existing physical illnesses which give rise to increased activation of the immune system, such as cancer, obesity, infection, and autoimmune disorders. Similarly, psychological states can alter regulation of the immune system. This has been most extensively studied in the context of stress and immune function. Understanding the underlying mechanisms that lead to the onset of inflammation-induced neuropathology and stress-induced immune suppression will contribute to the development of novel and effective treatment strategies for both the disease and its neurological side effects. In this research topic, we explored the relationship between the immune system and the brain throughout life. We include both original research and review papers from animal, clinical, and molecular perspectives.

Thermal Energy Yatish T. Shah, 2018-01-12
The book details sources of thermal energy, methods of capture, and applications. It describes the basics of thermal energy, including measuring thermal energy, laws of thermodynamics that govern its use, and transformation modes of thermal energy: conventional processes, devices, and materials, and the methods by which it is transferred. It covers 8 sources of thermal energy: combustion, fusion, solar, fission, nuclear, geothermal, microwave, plasma, waste heat, and thermal energy storage. In each case, the methods of production and capture and its uses are described in detail. It also discusses novel processes and devices used to improve transfer and transformation processes.

Outdoor Learning in Higher Education Wendy Garnham, Paolo Oprandi, 2024-08-15
Outdoor Learning in Higher Education is essential reading for educational developers and academic teachers of all disciplines interested in the theory behind and benefits of learning outdoors. Filled with practical case studies and backed by recent research, it provides educators with the tools needed to create an effective yet inclusive learning experience for their students beyond the lecture hall or seminar room. In chapters which offer analysis, discussion of current debates, and advice for good practice, the book is structured around five key themes: Theoretical perspectives and research supporting outdoor learning; Health and wellbeing benefits for learners and educators; Tools and techniques for teaching outdoors, including new technology; Examples of effective fieldwork; Crossing educational borders and implementing sustainability and the natural world into the curriculum. This key book covers issues which are relevant across all disciplines in higher education, including experiential learning, sustainability, diversity, and inclusion, and incorporating new technology. *Outdoor Learning in Higher Education* develops perspectives on these and other themes while encouraging the creation of inspiring and effective learning environments.

Adapt and Be Adept Terry L. Anderson, 2021-04-01 How can markets help us adapt to the challenges of climate change Editor Terry L Anderson brings together this collection of essays featuring the work of nine leading policy analysts who argue that market forces are just as important as government regulation in shaping climate policy and should be at the heart of our response to helping societies adapt to climate change Anderson notes in his introduction that most current climate policies such as the Paris Agreement require hard to enforce collective action and focus on reducing or mitigating greenhouse gases rather than adapting to their negative effects Adaptive actions can typically deliver much more faster and more cheaply than any realistic climate policy The authors tackle a range of issues the hidden costs of renewable energy sources the political obstacles surrounding climate change policy insurance and financial instruments for pricing risk of exposure to the effects of climate change and more Reliance on emerging renewable energies and a carbon tax are not enough to prevent the effects of global warming they argue We must encourage more private action and market incentives to adapt to a rapidly changing climate
