At Risk of Deprivation Jonas Bergmann, 2023-10-19 This open access book examines how and why various forms of climate im mobilities can impact people's objective and subjective well being Worsening climate impacts are forcing subsistence farmers worldwide to decide between staying or leaving their homes This mixed methods study analyzes cases of climate related migration displacement relocation and immobility in Peru's coastal highland and rainforest regions The results reveal that numerous farmers experienced profound and often negative well being impacts regardless of whether they stayed or migrated The higher the structural constraints such as weak governance and the more damaging the climate impacts were the higher the risk of well being declines Additionally the affected individuals often had limited agency and ability to mitigate

losses These findings challenge the notion of migration as adaptation and emphasize the importance of safeguarding the human rights and security of those affected while addressing loss and damage Without significant investments in such efforts climate impacts could sharply diminish the well being of numerous subsistence farmers worldwide irrespective of whether they stay or migrate

**An Introduction to the Green Economy** Adrian C. Newton,Elena Cantarello,2014-08-13 The green economy is widely seen as a potential solution to current global economic and environmental crises and a potential mechanism by which sustainable development might be achieved in practice Considerable investments are now being made into the development of green technology renewable energy biodiversity conservation resource efficiency recycling of materials and green infrastructure This textbook provides a comprehensive introduction to the green economy using a strongly interdisciplinary approach based on environmental science rather than treating it as a sub set of economics The scientific principles of sustainability are presented which provide the foundations of the green economy with a particular focus on systems based approaches Examples of real world case studies are used to illustrate how the green economy can be achieved in practice In this way the authors provide a thorough overview of both the principles and practice of the green economy drawing from a wide range of disciplines including ecology geography social science psychology sustainability science environmental science law and economics The emphasis is on presenting results of the latest research derived from leading scientific journals Rather than focusing on a single definition of what constitutes a green economy the book introduces readers to the diversity of opinion that exists and engages them in what is an active on going debate This reflects the fact that many aspects of the green economy and sustainable development more generally are currently contested In particular the book will help readers to strengthen their ability to critically evaluate the evidence for and against the views presented and to actively contribute to the future development of the green economy

*Routledge International Handbook of Green Criminology* Nigel South,Avi Brisman,2020-04-14 The Routledge International Handbook of Green

Criminology was the first comprehensive and international anthology dedicated to green criminology. It presented green criminology to an international audience, described the state of the field, offered a description of a range of environmental issues of regional and global importance, and argued for continued criminological attention to environmental crimes and harms, setting an agenda for further study. In the six years since its publication, the field has continued to grow and thrive. This revised and expanded second edition of the Handbook reflects new methodological orientations, new locations of study such as Asia, Canada, and South America, and new responses to environmental harms. While a number of the original chapters have been revised, the second edition offers a range of fresh chapters covering new and emerging areas of study such as conservation criminology, eco feminism, environmental victimology, fracking, migration, and eco rights and e waste. This handbook continues to define and capture the field of green criminology and is essential reading for students and researchers engaged in green crime and environmental harm.

**Climate Change Education** Chang Chew

Hung, 2014-05-09 Climate change is a controversial topic; some people assert that climate change is not occurring, and others believe that reports are inaccurate. That whilst climate change is happening, it may not be caused by human activity. There are also climate alarmists who use IPCC reports to support their claims that erratic weather patterns are a result of climate change caused by human activity. Regardless of these different viewpoints, one fact can be agreed upon: climate change is a complex subject, and there is a need to educate future generations, enabling them to deal with the plethora of information and views that they will experience in their lives. This book explores what education for climate change entails, discussing the concept of Climate Change Education (CCE) itself, how it can be taught in schools, and how public education can be carried out. It instructs what specific subject matter to teach for CCE and how to evaluate the student learning on the subject. Chapters include CCE in the Formal Curriculum, Teacher readiness for CCE, Assessment for and of CCE, Lessons from CCE for Public Education. Climate Change Education is an extremely useful resource for anyone involved in educating students on climate change, and also for those interested in climate change itself.
