Nondestructive Characterization of Materials VI Robert E. Green, K.J. Kozaczek, C.O. Ruud, 2012-12-06 Traditionally the vast majority of materials characterization techniques have been destructive e.g. chemical compositional analysis metallographic determination of microstructure tensile test measurement of mechanical properties etc Also traditionally nondestructive techniques have been used almost exclusively for the detection of macroscopic defects mostly cracks in structures and devices which have already been constructed and have already been in service for an extended period of time Following these conventional nondestructive tests it has been common practice to use somewhat arbitrary accept/reject criteria to decide whether or not the structure or device should be removed from service The present unfavorable status of a large segment of industry coupled with the desire to keep structures in service well past their original design life dramatically show that our traditional approaches must be drastically modified if we are to be able to meet future needs The role of nondestructive characterization of materials is changing and will continue to change dramatically It has become increasingly evident that it is both practical and cost effective to expand the role of nondestructive evaluation to include all aspects of materials production and application and to introduce it much earlier in the manufacturing cycle In fact the recovery of a large portion of industry from severe economic problems is dependent in part on the successful implementation of this expanded role **Energy Research Abstracts**, 1986 *Psychopathology and Function* Bette Bonder, 2024-06-01 A

Amorphous and Microcrystalline Silicon Solar Cells: Modeling, Materials and Device Technology Ruud E.I. Schropp, Miro Zeman, 2016-07-18 Amorphous silicon solar cell technology has evolved considerably since the first amorphous silicon solar cells were made at RCA Laboratories in 1974 Scientists working in a number of laboratories worldwide have developed improved alloys based on hydrogenated amorphous silicon and microcrystalline silicon Other scientists have developed new methods for growing these thin films while yet others have developed new photovoltaic PV device structures with improved conversion efficiencies In the last two years several companies have constructed multi megawatt manufacturing plants that can produce large area multijunction amorphous silicon PV modules A growing number of people believe that thin film photovoltaics will be integrated into buildings on a large scale in the next few decades and will be able to make a major contribution to the world's energy needs In this book Ruud E I Schropp and Miro Zeman provide an authoritative overview of the current status of thin film solar cells based on amorphous and microcrystalline silicon They review the significant developments that have occurred during the evolution of the technology and also discuss the most important recent innovations in the deposition of the materials the understanding of the physics and the fabrication and modeling of the devices

The Science of Bureaucracy David Demortain, 2020-01-21 How the US Environmental Protection Agency designed the governance of risk and forged its legitimacy over the course of four decades The US Environmental Protection Agency was established in 1970 to protect the public health and environment administering and enforcing a range of statutes and programs Over four decades the EPA has been a risk bureaucracy formalizing many of the methods of the scientific governance of risk from quantitative risk assessment to risk ranking Demortain traces the creation of these methods for the governance of risk the controversies to which they responded and the controversies that they aroused in turn He discusses the professional networks in which they were conceived how they were used and how they served to legitimize the EPA Demortain argues that the EPA is structurally embedded in controversy resulting in constant reevaluation of its credibility and fueling the evolution of the knowledge and technologies it uses to produce decisions and to create a legitimate image of how and why it acts on the environment He describes the emergence and institutionalization of the risk assessment risk management framework codified in the National

Research Council's Red Book and its subsequent unraveling as the agency's mission evolved toward environmental justice, ecological restoration and sustainability and as controversies over determining risk gained vigor in the 1990s. Through its rise and fall at the EPA risk decision making enshrines the science of a bureaucracy that learns how to make credible decisions and to reform itself amid constant conflicts about the environment risk and its own legitimacy.
