a complementary way This is how the widely recognized gap between domain experts and software engineers could be effectively addressed The content is on the one hand based on a conceptual invariance embracing concepts whose essence transcends the barriers between social and technical disciplines while on the other the book is featuring a modeling duality by bringing together social theories that are underlying with regard to enterprise engineering and computing paradigms that are underlying as it concerns software engineering In addition the proposed approach as well as its guidelines and related notations further foster such enterprise software modeling by facilitating modeling generations and transformations Considering unstructured business information in the beginning the modeling process would progress through the methodological construction of enterprise models to reach as far as a corresponding derivation of software specifications Finally the enterprise software alignment is achieved in a component based way featuring a potential for re using modeling constructs such that the modeling effectiveness and efficiency are further stimulated For the sake of grounding the presented studies a case study and illustrative examples are considered They are not only justifying the idea of bringing together in a component based way enterprise modeling and software specification but they are also demonstrating various strengths and limitations of the proposed modeling approach The book was mainly written for researchers and graduate students in enterprise information systems and also for professionals whose work involves the specification and realization of such systems In addition researchers and practitioners entering these fields will benefit from the blended view on enterprise modeling and software specification for the sake of an effective and efficient design of enterprise information systems
