Recommendations For Reducing Emissions From The Legacy Diesel Fleet:

Recommendations for Reducing Emissions from the Legacy Diesel Fleet U. S. Environmental Agency,2015-01-06 Diesel engines play a vital role in key industry sectors such as goods movement public transportation construction and agriculture A unique combination of efficiency power reliability and durability make diesel the technology of choice for these sectors However the durability of the technology does not lend itself to rapid fleet turnover and investment in new equipment that meets more stringent environmental standards Because of this the full air quality benefits of the very stringent new engine emission standards in the US2007 Diesel Rule Heavy Duty Engine and Vehicle Standards and Highway Diesel Fuel Sulfur Control Requirements and the Nonroad Diesel Rule Clean Air Nonroad Diesel Rule will likely take decades to achieve Further the regulatory authority of EPA and states to address the existing fleet of over 11 million diesel engines is rather limited In response EPA began the Voluntary Diesel Retrofit Program in 2000 to discuss broad initiatives to modernize and upgrade i e retrofit current engines with modern emission control equipment or to accelerate the replacement of these engines with newer ones Given the diversity of applications and engines as well as significant technical and funding issues the Clean Diesel Retrofit Work Group was formed in 2004 under the auspices of the EPA Clean Air Act Advisory Committee CAAAC to advise EPA on how best to expand the initiative This report is the culmination of the work of the Clean Diesel and Retrofit Work Group since April 2004 It provides consensus based recommendations as well as other recommendations Some recommendations are sector specific others apply more broadly It is our hope that this report will substantially further our Nation s efforts to achieve healthy air for its citizens
