Polynomial Theory Of Error Correcting Codes Signals And Communication Technology:

Polynomial Theory of Error Correcting Codes Giovanni Cancellieri, 2014-11-08 The book offers an original view on channel coding based on a unitary approach to block and convolutional codes for error correction It presents both new concepts and new families of codes For example lengthened and modified lengthened cyclic codes are introduced as a bridge towards time invariant convolutional codes and their extension to time varying versions The novel families of codes include turbo codes and low density parity check LDPC codes the features of which are justified from the structural properties of the component codes Design procedures for regular LDPC codes are proposed supported by the presented theory Quasi cyclic LDPC codes in block or convolutional form represent one of the most original contributions of the book The use of more than 100 examples allows the reader gradually to gain an understanding of the theory and the provision of a list of more than 150 definitions indexed at the end of the book permits rapid location of sought information

Modern Coding Theory Tom Richardson, Rüdiger Urbanke, 2008-03-17 Having trouble deciding which coding scheme to employ how to design a new scheme or how to improve an existing system This summary of the state of the art in iterative coding makes this decision more straightforward With emphasis on the underlying theory techniques to analyse and design practical iterative coding systems are presented Using Gallager's original ensemble of LDPC codes the basic concepts are extended for several general codes including the practically important class of turbo codes The simplicity of the binary erasure channel is exploited to develop analytical techniques and intuition which are then applied to general channel models A chapter on factor graphs helps to unify the important topics of information theory coding and communication theory Covering the most recent advances this text is ideal for graduate students in electrical engineering and computer science and practitioners Additional resources including instructor's solutions and figures available online www.cambridge.org/9780521852296
