

point $(0, 0, \dots, 0, z)$, that is,

$$S_r^{k-2}(z) = \{x : x_1^2 + \dots + x_{k-1}^2 = r^2, x_k = z\}.$$

When $z = 0$, we shall write simply S_r^{k-2} and identify this sphere with the same $(k-2)$ -dimensional hypersphere in R^{k-1} . We observe that $S_r^0(z)$ consists of the two points (r, z) and $(-r, z)$ in R^2 . Another way of defining the set $S_r^{k-2}(z)$ is as the intersection of the $(k-1)$ -dimensional sphere of radius r centered at $(0, 0, \dots, 0, z)$ in R^k with its equatorial hyperplane $P_z = \{(x_1, \dots, x_k) : x_k = z\}$.

Second, for each $a \in R^k$ and each $\delta > 0$, $I_a^k(\delta)$ is the closed hypercube of side δ in R^k whose "lower left" corner is a , that is

$$I_a^k(\delta) = \{x : a_j \leq x_j \leq a_j + \delta, j = 1, \dots, k\}.$$

Third, the set of points $(m_1, \dots, m_k) \in R^k$ having integer coordinates will be denoted \mathcal{Z}^k .

Fourth, for all real numbers r and δ such that $0 < \delta < r$, $C_{r,\delta}^k$ is the set of lattice points $m \in \mathcal{Z}^k$ for which the closed hypercube of side δ with lower left corner δm intersects the hypersphere S_r^{k-1} in R^k . That is,

$$C_{r,\delta}^k = \{m : I_{\delta m}^k(\delta) \cap S_r^{k-1} \neq \emptyset\}.$$

Fifth, $N(r, \delta, k)$ is the number of points in $C_{r,\delta}^k(z)$, that is, the number of hypercubes of side δ with lower left hand corner at a point δm , $m \in \mathcal{Z}^k$, that intersect the hypersphere S_r^{k-1} . Our main goal in the first stage of the proof will be to prove the estimate $N(r, \delta, k) \leq 6^{k^2} (\frac{r}{\delta})^{k-1}$. (A smaller constant than 12^{k^2} could easily be attained, but we have no need of any improvement, and this constant seems to be the one that makes the argument simplest.)

Sixth, and finally, $A_{r,\delta}^k$ is the union of all the hypercubes $I_{\delta m}^k(\delta)$ that intersect the hypersphere S_r^{k-1} , that is, for which $m \in C_{r,\delta}^k$. This set is a finite union of compact sets, hence is compact. Obviously it contains the hypersphere S_r^{k-1} . What is slightly less obvious is that its interior contains this sphere. In fact no point of the sphere can be a limit point of points exterior to $A_{r,\delta}^k$, since if $\{x_n\}$ is a sequence of points such that each x_n belongs to a hypercube $I_{\delta m_n}^k(\delta)$ not contained in $A_{r,\delta}^k$, and $x_n \rightarrow x$, some set $I_{\delta m_{n_0}}^k(\delta)$ must occur infinitely often. (Any bounded neighborhood of x intersects only finitely many of these hypercubes.) Since $I_{\delta m_{n_0}}^k(\delta)$ is closed, this implies that x belongs to $I_{\delta m_{n_0}}^k(\delta)$. Since $I_{\delta m_{n_0}}^k(\delta)$ is not contained in $A_{r,\delta}^k$ it follows that $x \notin S_r^{k-1}$. Thus no sequence of points exterior to $A_{r,\delta}^k$ can approach a point of S_r^{k-1} . It follows that S_r^{k-1} contains no points of the boundary of $A_{r,\delta}^k$ and is therefore contained in the interior of this set.

With these definitions out of the way we can proceed to the proof, which we break into several stages, each broken into several steps, in order to make navigating easier.

Stage 1. Establish that the sphere S_r^{k-1} in R^k has k -dimensional content 0.

Spectral Synthesis, 1976-06-28 *Spectral Synthesis* **Fourier Series** R.E. Edwards, 2012-12-06 The principal aim in writing this book has been to provide an introduction barely more to some aspects of Fourier series and related topics in which a liberal use is made of modern techniques and which guides the reader toward some of the problems of current interest in harmonic analysis generally The use of modern concepts and techniques is in fact as wide spread as is deemed to be compatible with the desire that the book shall be useful to senior undergraduates and beginning graduate students for whom it may perhaps serve as preparation for Rudin's *Harmonic Analysis on Groups* and the promised second volume of Hewitt and Ross's *Abstract Harmonic Analysis* The emphasis on modern techniques and outlook has affected not only the type of arguments favored but also to a considerable extent the choice of material Above all it has led to a minimal treatment of pointwise convergence and summability as is argued in Chapter 1 Fourier series are not necessarily seen in their best or most natural role through pointwise tinted spectacles Moreover the famous treatises by Zygmund and by Baryon trigonometric series cover these aspects in great detail while leaving some gaps in the presentation of the modern viewpoint the same is true of the more elementary account given by Tolstov Likewise and again for reasons discussed in Chapter 1 trigonometric series in general form no part of the program attempted

Linear Partial Differential Equations and Fourier Theory Marcus Pivato, 2010-01-07 Do you want a rigorous book that remembers where PDEs come from and what they look like This highly visual introduction to linear PDEs and initial boundary value problems connects the math to physical reality all the time providing a rigorous mathematical foundation for all solution methods Readers are gradually introduced to abstraction the most powerful tool for solving problems rather than simply drilled in the practice of imitating solutions to given examples The book is therefore ideal for students in mathematics and physics who require a more theoretical treatment than given in most introductory texts Also designed with lecturers in mind

the fully modular presentation is easily adapted to a course of one hour lectures and a suggested 12 week syllabus is included to aid planning Downloadable files for the hundreds of figures hundreds of challenging exercises and practice problems that appear in the book are available online as are solutions
