## ROCHESTER CARBURETOR MODEL 104

### THEORY OF OPERATION

#### CHOKE VALVE (Fig. 104)

The choke valve is located in the main body of the carburetor. It is operated by the choke cable which is connected to the choke lever. When the choke lever is moved to the "CHOKE" position, the choke valve is closed, which restricts the flow of air into the carburetor. This causes the mixture to become richer, which is necessary for starting the engine in cold weather.
