Gijbels, 2013-08-21 This book is on data analytic approaches to regression problems arising from many scientific disciplines These approaches are also called nonparametric regression in the literature The aim of non parametric methods is to relax assumptions on the form of a regression function and to let data search for a suitable function that describes well the available data These approaches are powerful in exploring fine structural relationships and provide very useful diagnostic tools for parametric models Over the last two decades vast efforts have been devoted to nonparametric regression analyses This book hopes to bring an up to date picture on the state of the art of nonparametric regression techniques The emphasis of this book is on methodologies rather than on theory with a particular focus on applications of nonparametric techniques to various statistical problems These problems include least squares regression quantile and robust regression survival analysis generalized linear models and nonlinear time series Local polynomial modelling is employed in a large fraction of the book but other key ideas of nonparametric regression are also discussed **The Polynomial Toolbox 2 for Use with Matlab 5** , 1999 Rational Approximation and Orthogonal Polynomials , 1989 *Fast Computation of Auxiliary Quantities in Local Polynomial Regression* B.
