Risk Management

M. A. H. Dempster, 2002-01-10 The use of derivative products in risk management has spread from commodities stocks and fixed income items to such virtual commodities as energy weather and bandwidth All this can give rise to so called volatility and there has been a consequent development in formal risk management techniques to cover all types of risk market credit liquidity etc One of these techniques Value at Risk was developed specifically to help manage market risk over short periods Its success led somewhat controversially to its take up and extension to credit risk over longer time scales This extension ultimately not successful led to the collapse of a number of institutions The present book which was originally published in 2002 by some of the leading figures in risk management examines the complex issues that concern the stability of the global financial system by presenting a mix of theory and practice

Road Research Technical Paper, 1968

Immune regulation at the fetal/maternal interface with focus on decidual macrophages Judit Svensson, Arvelund, 2015-04-21 A successful pregnancy requires that the maternal immune system adapts to tolerate the semi allogeneic fetal placental unit This adaptation mainly occurs locally i.e. at the fetal

maternal interface where fetal derived tissues come into close contact with maternal cells in the uterine endometrium called decidua during pregnancy Macrophages and regulatory T Treg cells are maternal immune cells that are enriched in the decidua and they likely play a central role in promoting fetal tolerance However the precise function of decidual macrophages and the factors regulating both macrophages and Treg cells in humans are unknown The aim of this thesis was to characterize the phenotype and function of decidual macrophages from first trimester human pregnancy and to identify factors responsible for inducing tolerogenic properties in both decidual macrophages and Treg cells CD14 decidual macrophages showed characteristics of immune suppressive or homeostatic macrophages expression of CD163 CD206 and CD209 mainly produced immunosuppressive cytokines like IL 10 and IL 35 while levels of inflammatory cytokines for instance IL 12 and IL 23 were low Decidual macrophages also induced the expansion of CD25^{high}Foxp3 Treg cells but not of Th1 Th2 and Th17 cells in vitro In addition decidual macrophages preferentially secreted the monocyte and Treg cell associated chemokines CCL2 and CCL18 while Th1 Th2 and Th17 related chemokines were produced at low levels These results suggest that decidual macrophages contribute to create the unique decidual cell composition and a tolerogenic immune environment that is compatible with fetal development Further by comparing decidual macrophages with different in vitro macrophage subsets we showed that M CSF and IL 10 but not GM CSF Th1 or Th2 stimuli induced macrophages that resemble decidual macrophages in terms of cell surface marker expression cytokine and chemokine production and gene expression profile First trimester placental tissue in particular placental trophoblast cells was identified as an important source of M CSF and IL 10 We also demonstrated that human fetal derived placental tissue can induce the characteristics of decidual macrophages CD163 CD206 CD209 IL 10 CCL18 and the selective expansion of functionally suppressive CD25^{high}Foxp3 Treg cells the latter partly mediated through IL 10 TGF and TRAIL The placenta also limited activation of Th cells for instance by generally reduced cytokine production Our data show that the placenta has a unique ability to induce tolerogenic immune cells with a reduced inflammatory potential which is essential for maintaining tissue integrity and preventing inflammation induced fetal loss
