Business Strategy in a Semiglobal Economy Panos Mourdoukoutas, 2015-03-26 This groundbreaking text provides both theory and strategy for operating in a semiglobal economy in which international businesses must compete in highly globalized and highly localized markets at the same time. Unlike the traditional transnational and matrix corporate models, a semiglobal corporation organizes its operations according to the global, local content of its value propositions rather than according to geographical regions, products, or contribution to the parent company's performance. As an example of a semiglobal corporation, the Honda Motor Company has a global vision when it comes to highly global bundles like car engines and a local vision when it comes to highly localized car financing and servicing. Designed as a supplementary text for courses in international business, development, economics, marketing, and strategic planning, *Business Strategy in a Semiglobal Economy* raises important challenges to the conventional models of business organization and the competitive strategies that proceed from them.

Newsreview, 1999 **Korean Report**, 1963 **Artificial Intelligence** David Sweenor, 2022-04-02 In the business world, the very term artificial intelligence (AI) is shrouded in mystery. For some, it's the brains behind a robotic apocalypse. For others, it provides hope for a better society with self-driving cars, food security, and medical breakthroughs. But what about for businesses? For most executives, the term AI is vague, confusing, and although intriguing, it seems unapproachable. *Artificial Intelligence: An Executive Guide to Make AI Work for Your Business* is designed for non-experts; it's for business teams, business leaders, and executives who never seem to have enough time in the day to learn about the latest technology trends. *TinyTechGuides* are meant to be read in under two hours and focus on the application of technologies in business, government, and educational settings. This book covers the fundamentals of AI, data analytic, and automation technologies, from modern data management techniques to chatbots, machine learning, natural language processing, NLP, robotic process automation, RPA, and computer vision.
