

Abstract:

The global epidemic of childhood obesity is posing serious difficulties to public health systems across the globe. The goal of this thorough analysis is to investigate the complex interactions between genetic, environmental, behavioural, socioeconomic, cultural, and familial factors that contribute to childhood obesity. We'll also look at the socioeconomic effects of childhood obesity and how it affects kids' physical and emotional health. Additionally, the individual, community, and policy levels of evidence-based interventions and policies targeting the prevention and management of paediatric obesity will be examined. We may endeavour to create healthier surroundings and promote children's well-being by comprehending the intricate interplay of factors contributing to childhood obesity and putting focused interventions into place.

Chapter 1: Introduction to Childhood Obesity

Childhood obesity is characterised by the accumulation of extra body fat that puts children and adolescents at risk for health problems. Over the past few decades, childhood obesity has become a serious global public health concern due to its tremendous growth in prevalence. An overview of paediatric obesity's prevalence and trends is given in this chapter, along with an emphasis on the effects it has on healthcare systems and patient outcomes. We'll also talk about the socioeconomic effects of childhood obesity, such as lost productivity and medical expenses.

Chapter 2: Genetic Determinants of Childhood Obesity

There is a strong genetic component to an individual's susceptibility to obesity. The genetic causes of paediatric obesity are examined in this chapter, with particular attention paid to genes that control hunger, metabolism, and fat storage. Research on twins and families has shed light on the heredity of obesity by showing that a significant amount of individual variations in body weight can be attributed to hereditary factors. Furthermore, particular gene variations linked to an increased risk of obesity have been found thanks to advancements in genomic research. However, a multifaceted approach to the prevention and management of obesity is crucial since genetic predisposition interacts with environmental and behavioural factors.

Towards Sustainable Development Goal of Zero Hunger: Exploring the Dynamic Relationships between Food Pricing, Agriculture, and Food Security Noshaba Aziz,Wioletta Żukiewicz-Sobczak ,Ruishi Si,2025-10-16 United Nations Sustainable Development Goal SDG 2 aspires to eradicate hunger by 2030 emphasizing the intricate relationships between agriculture food security and nutrition However this noble pursuit faces formidable challenges in emerging countries due to a confluence of international disruptions Climate change the COVID 19 pandemic and geopolitical conflicts like the war in Ukraine have triggered sharp spikes in commodity prices amplifying food security concerns particularly in developing nations The Food and Agriculture Organization of the United Nations recently reported the highest global food price increase since the 1990s in March This commodity price inflation in turn reverberates across agriculture impacting not only a nation s economy but also its food production capacity Elevated

commodity prices drive up the costs of agricultural inputs such as fertilizers pesticides and fuel compelling farmers to pass these expenses on to consumers in the form of higher food prices Moreover country specific economic factors within the agricultural sector including land ownership technology adoption farming practices and infrastructure further complicate the food security landscape Therefore the intricate interplay between commodity price inflation agriculture and food security is significantly influenced by a nation s unique economic dynamics within its agricultural sector Effectively addressing these challenges necessitates a blend of international and domestic policy measures to ensure that the benefits of agricultural progress reach the broader population

Exploring the Interaction between Health-promoting and Health Risk Behaviors in Health, volume II Huixuan Zhou,Feng Jiang,Yi-lang Tang,2025-09-15 Health related behaviors play positive or negative roles in people s health For instance health risk behaviors such as sedentary behaviors e g binge watching TV and playing computer games the use of alcohol tobacco or other substances and lack of sleep have been found to negatively affect the physical and mental health of people On the other hand some studies show that health promoting behaviors such as physical activity and healthy dietary habits can mitigate or reverse the negative effects of health risk behaviors on health outcomes In the meantime some studies indicate that the harmful effects of some health risk behaviors may not be mitigated by health promoting behaviors For instance some studies show that sedentary behaviors and physical activity are independently associated with some physical and mental health outcomes interventions to increase physical activity with and without decreasing sedentary time lead to different health outcomes Clearly more research is needed to show the interaction between health promoting behaviors and health risk behaviors in health which could shed light on the management of health related behaviors
