The Physical Signature of Computation Neal G. Anderson, Gualtiero Piccinini, 2024 Anderson and Piccinini offer the most systematic rigorous and comprehensive account of computational implementation to date Their robust mapping account holds that the key for establishing that a computation is physically implemented is that the physical states bear neither more nor less information than the computational states they map onto

Sea Level Change and Maritime Boundaries Antoine Grima, 2023-06-23 Climate change is modifying in varying measure the coastal geography of States The phenomenon is not temporary but is expected to carry on during the 21st century and beyond A distinctive feature

of modern international law is the concept of maritime zones. Each maritime area is subject to an intricate scheme of States' rights and obligations. Coastal geography is a fundamental component of a long-standing method developed and agreed upon between States to establish the outward limits of these areas. A feature of this method is the baseline. In international law, it is the only reference line from where the outward limits of maritime zones are measured. There are clear rules on how this is established along a coast. There is a concern amongst a number of States that rising sea water levels as a result of climate change may compel them to shift their baselines inward, thus affecting the outward limits of their maritime zones. It is clear that the stability of maritime boundaries is put into question and this may bring about serious political, legal, and economic repercussions. This concern may also affect the outcome of dispute settlement procedures before a competent international court or tribunal, the purpose of which is to resolve overlapping maritime claims. Key questions emerge: What is the role played by coastal geography in the legal regime determining the outward limits of maritime zones? What are the consequences of changes to coastal geography? To what extent are dispute settlement procedures before a Court or Tribunal immune from this concern? Is international law able to address this? If so, in what way, and what are its limits? What can be done to resolve this?

[Our Warming Planet: Climate Change Impacts And Adaptation](#) Martin Parry, Cynthia Rosenzweig, Manishka De Mel, 2021-10-22. This volume, the second in the Lectures in Climate Change series, covers the full array of climate impacts and adaptation measures. It has been brought together by friends and colleagues of Dr Martin Parry, Co-Chair of the Intergovernmental Panel on Climate Change (IPCC) 2007 assessment on impacts and adaptation. The writers are experts in this field and have been lead authors in many of the IPCC assessments and other major publications. Lectures in Climate Change is a unique combination of written text plus electronic slides that together comprise an informative and up-to-date set of presentations. This second volume, entitled *Our Warming Planet: Climate Change Impacts and Adaptation*, covers areas of climate impacts related to climate science methods and approaches, sectors, regional and national studies, and policy and practice. The volume comprises topics such as current and future challenges of climate change, global assessments, downscaling, community-based adaptation, impacts on biodiversity, food systems, water resources, and cities. Research from across the world is presented on making science actionable through assessments, early warning, and early action; communicating climate risk; documenting the uptake of adaptation on the global front; and transformation towards systemic resilience. Included with this publication are downloadable electronic slides and accompanying notes of each lecture for students, teachers, and public speakers around the world to be better able to understand and present climate change impacts and adaptation. Related Links: *Green Finance in the European Union* Marta Postuła, Mariusz Lipski, 2024-09-02. While global challenges continue to reshape the here and now, public and corporate finance management needs to adapt quickly to increase the efficiency of institutions, enterprises, and policies to face our new reality. There are very few publications that offer a comprehensive approach to the financing of environmental protection activities by the European Union. This book

explores this topic from various angles and levels as well as highlighting the determinants that influence micro and macro level decisions in this area It presents an in depth and unique analysis of the sources of funding for environmental measures implemented by European Union institutions against the backdrop of national expenditure by Member States and analyses the plausibility of the adopted targets in the run up to 2050 in the context of the war in Ukraine and ad hoc energy policy solutions This book is a voice in an ongoing discussion among the community of practitioners and theoreticians on sources of financing for the energy transition to achieve independence from Russian sources in the quickest possible timeframe It demonstrates that environmental measures cannot occur without the financial participation of economic actors and financial institutions particularly the capital market and further underscores the scale of involvement in environmental projects as measured by the value of green loans and green bonds covered by European financial institutions The authors offer policy recommendations for financing activities related to environmental policy notably energy transition This book will appeal to scholars students and researchers of corporate finance banking strategic and public finance management as well as policymakers and practitioners involved in green finance investments

**Social Capital, Resilience and Adaptation on Small Islands** Jan Petzold, 2017-03-24 The book deals with the role of social capital regarding its potential to increase small islands adaptive capacity to climate change The case study of the Isles of Scilly UK shows how social structures can play a very important role for climate change adaptation It is argued that social features have to be understood in a non deterministic and potentially ambivalent manner according to their place specific geographical cultural and historical context Only then risk management and adaptation strategies can succeed and function in a sustainable way The findings have relevance for the further refinement of social capital theory and social emergence Combined with the perspective of resilience this approach is also relevant from a policy standpoint given that small islands have been identified as hotspots not only due to their vulnerability but also because they serve as examples for media and politics to advance the agenda of environmental protection
