The regulation of Geoengineering Great Britain: Parliament: House of Commons: Science and Technology Committee,2010-03-18 Geoengineering describes activities specifically and deliberately designed to effect a change in the global climate with the aim of minimising or reversing anthropogenic climate change The Committee gives three reasons why they believe regulation is needed First in the future some geoengineering techniques may allow a single country to unilaterally affect the climate Second some geoengineering testing is already underway Third we may need geoengineering in the event of a failure to reduce greenhouse gases we are faced with highly disruptive climate change The Committee does not call for an international treaty but for the groundwork for regulatory arrangements to begin The UN is the route by which eventually they envisage the regulatory framework operating but first the UK and other governments need to push geoengineering up the international agenda and get processes moving
