Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and heart rate reserve (HRR) of sedentary, middle-aged men. The subjects were randomly assigned to a control group (CON) and an exercise group (EX). The EX group performed a 10-week training program consisting of three sessions per week of aerobic exercise. The HR and HRR were measured at rest and during submaximal exercise at the beginning and end of the 10-week period. The EX group showed a significant decrease in HR and HRR at rest and during submaximal exercise compared to the CON group. The results suggest that a 10-week training program can improve cardiovascular fitness in sedentary, middle-aged men.

23. When configuring a multi-mount AFS, set `mountmnt` and `mountmnt2` to your NetApp's `mount` and `mount2` commands.
24. If you are using the `afs` file system mount method, add the `afs` file system mount entry to the `afs` file system entry. In the `afs` file system entry, the `mountmnt` and `mountmnt2` fields are optional. This is important to allow for a purchase of this type of multi-mount AFS, as pointing out the `afs` group (see `afs` group).
25. Do not include the `afs` file system entry, as it is deprecated.
26. Use the `afs` file system entry to add the `afs` file system entry to the `afs` file system entry.

When you install your T-Value One Connection, improper installation of all four screws (52 connections for One Connection®) will affect the overall health, safety and life of the system. Proper ventilation is critical to maintain proper ventilation. Failure to maintain proper ventilation may result in the following problems with the product:

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A rise in the price of the output will cause a producer to produce more output, and a fall in the price of the output will cause a producer to produce less output.
